ENTRANCE DOORS

THE EXCLUSIVE ENTRANCE OF YOUR PERSONAL CHOICE

Welcome to the World of EXCLUSIVE DOORS

EXCLUSIVE entrance doors assume a distinctive role in the shape, function and design of residential and office buildings.

An **EXCLUSIVE** entrance door characterises your house - it lends a unique flair to the entrance of your home, expressing your unique taste & style.

Confidently stylish high-class - an impressive symbol of your philosophy of life that does not compromise on safety.

All materials used in an **EXCLUSIVE** entrance door are manufactured in accordance with the most modern production methods.

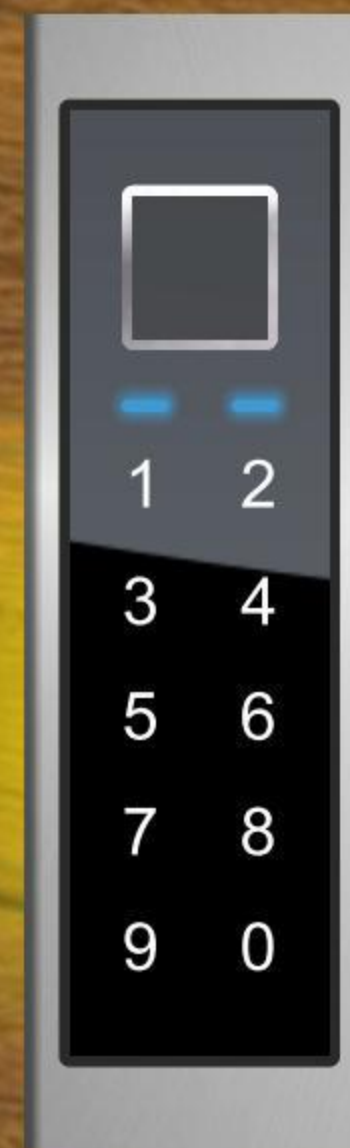

Continuous and constant in-house and external inspections and tests ensure consistently high quality in the fabrication and create an end product of the best quality.

We are confident that we will be able to accommodate all of your requirements and meet your specific needs.

EXCLUSIVE entrance doors have the following benefits:

- Vast range of models and accessories
- Implementation of your own needs and expectations
- Excellent thermal and sound insulation values
- High level of security against burglary
- Long service life of the doors
- Low cost and effortless maintenance and care

NEW!

AT 110
 CLASSIC FORM

Aluminium
 is a lightweight, strong and rustproof material, simple to care for and has an exceptionally long lifespan. It enables precise treatment, which is very important in the manufacture of products that need to be very airtight and achieve a high level of acoustic and thermal insulation.

*
Aluminium
 is produced from natural ore – bauxite, which is available in practically unlimited quantities.

*
The energy necessary for aluminium production
 is mostly obtained in hydroelectric power plants all over the world. Used aluminium products are recycled – or the aluminium is recycled by which the reused aluminium retains its original characteristics.

*
 The recycling process of (used) aluminium only requires about 5% energy of the basic production procedure. In Europe, about 35% aluminium products are made from recycled aluminium, with this share on the increase.

The entrance doors of the Exclusiv range have standard high quality equipment,

BT 5 / 5-POINT LATCH LOCK

and an end-to-end shooting adjustable keep bar made of solid stainless steel.

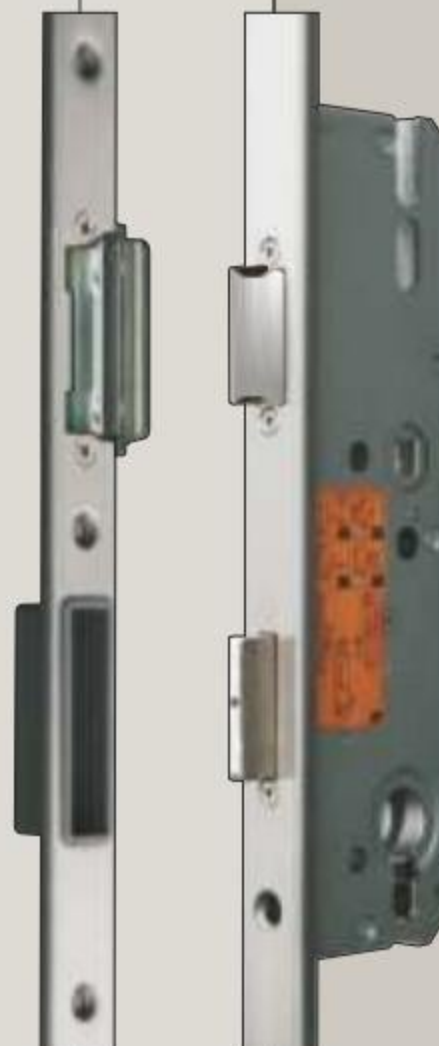

If the customer wishes to increase anti-burglary protection, they can select from among the additional options listed in the range of fittings and hardware.

Standard equipment

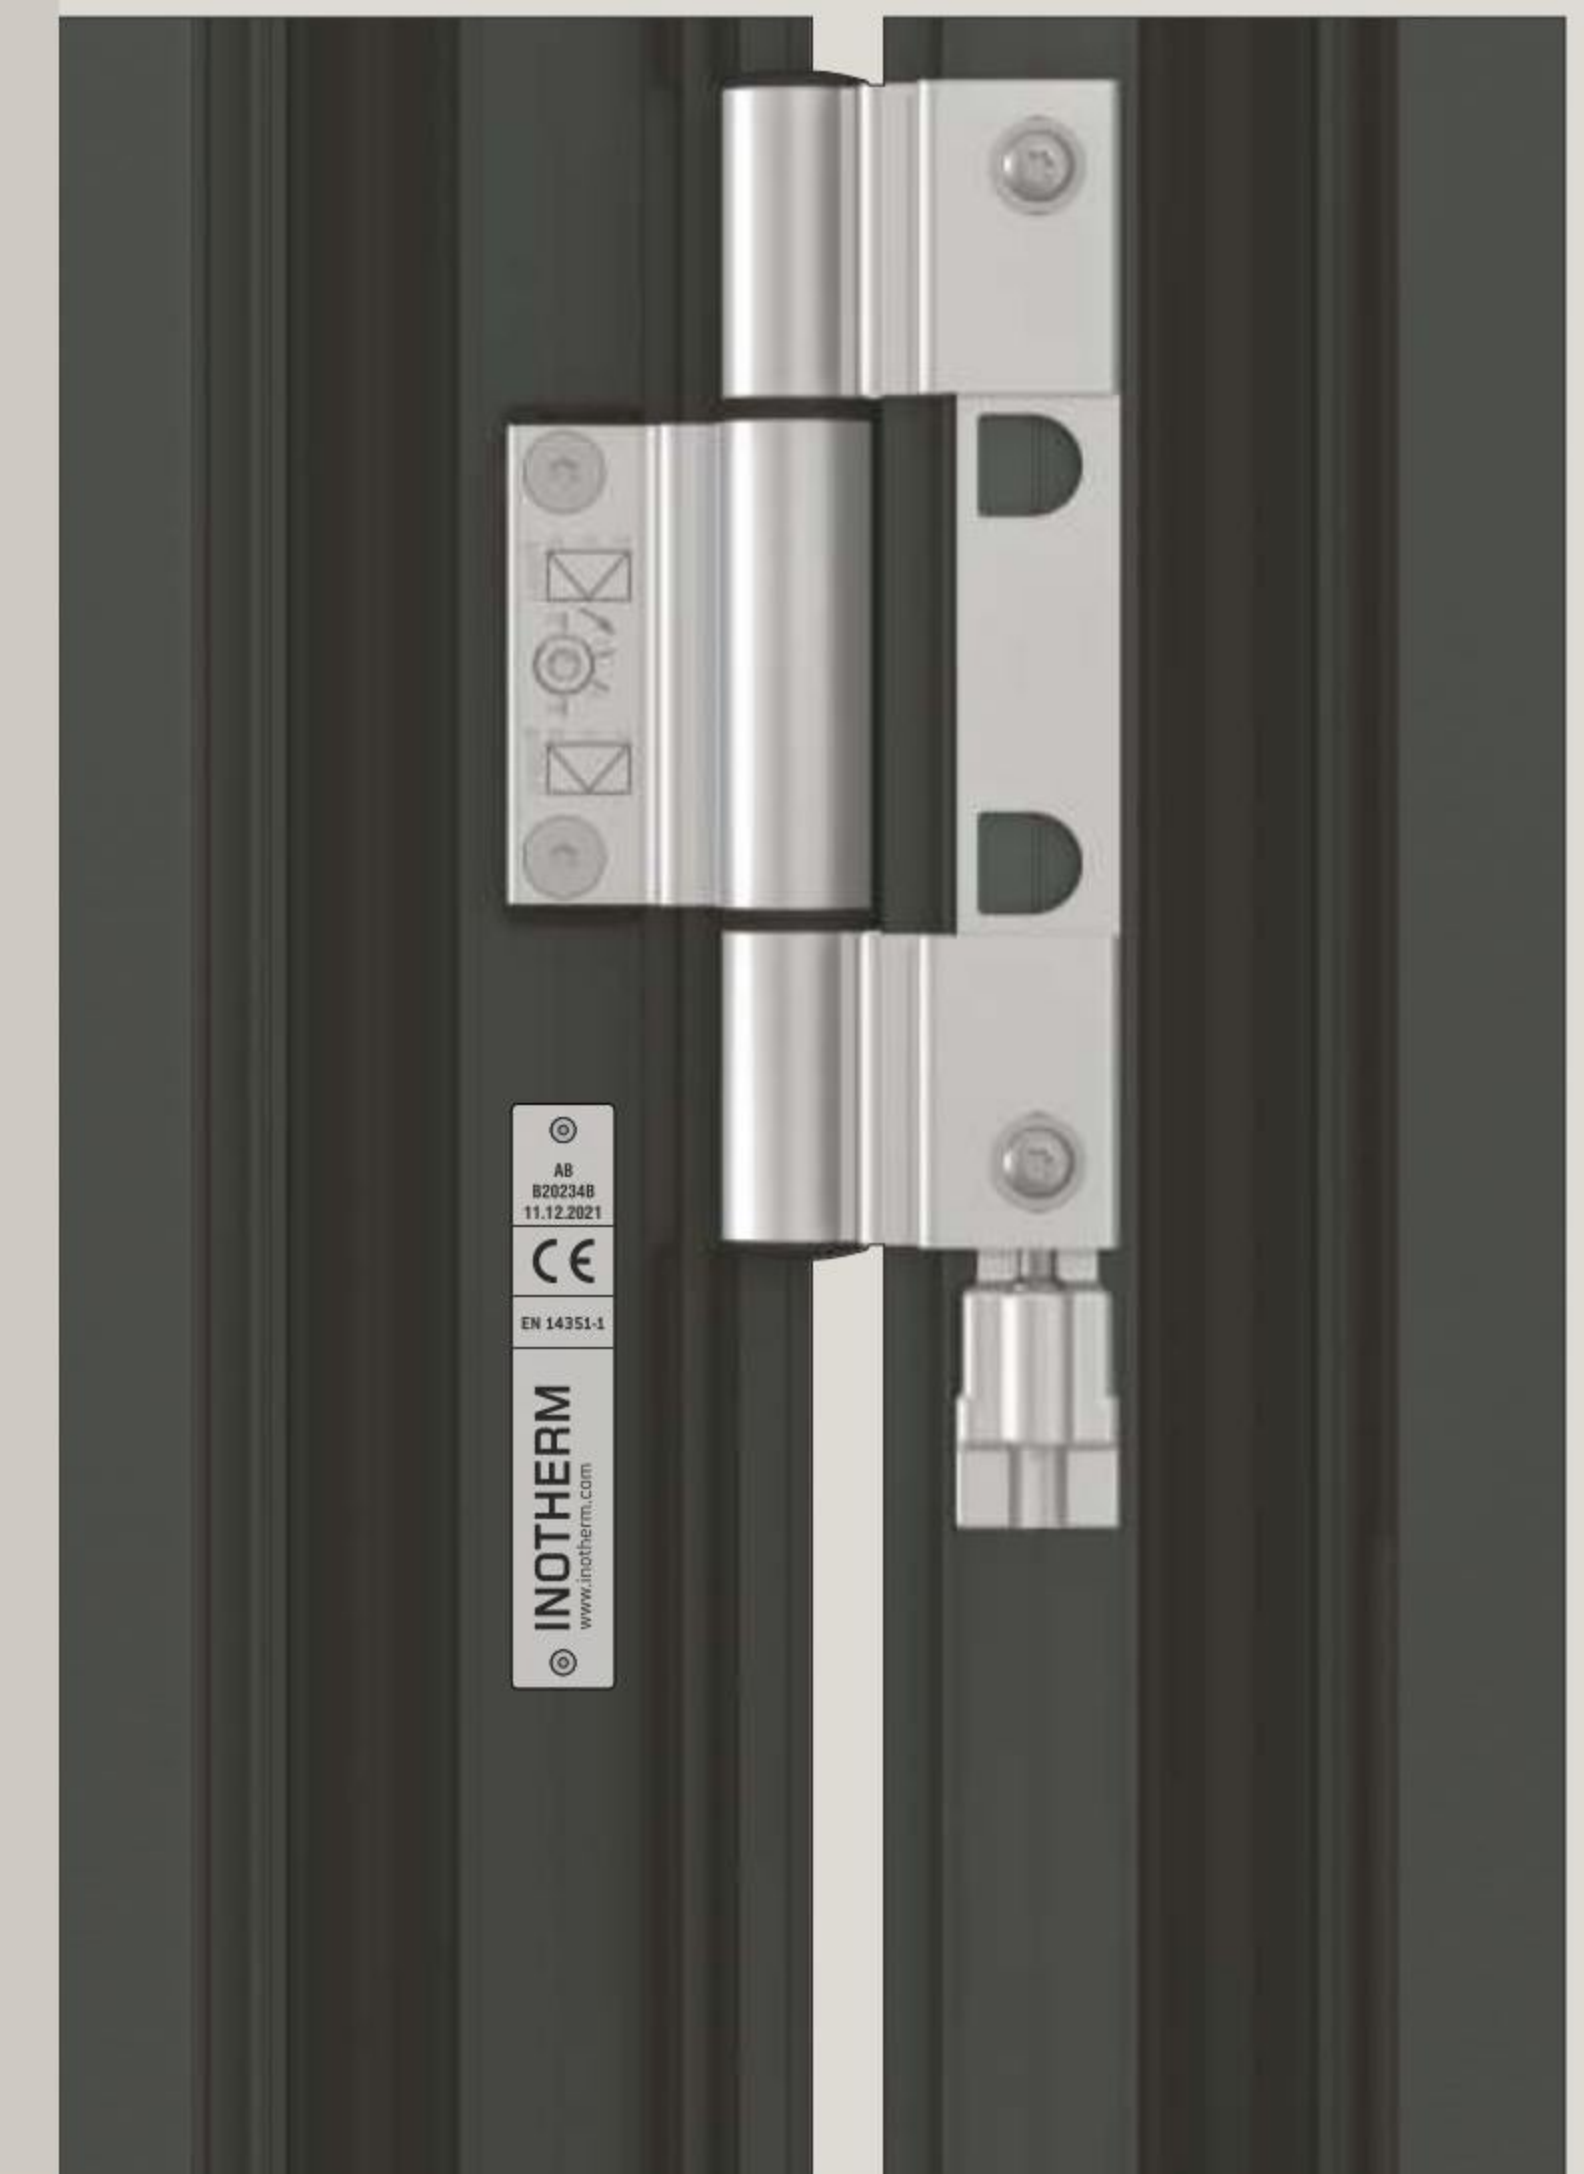

POLISHED STAINLESS STEEL DOOR FITTING STANDARD

Outside: Knob / inside: Handle
 Polished protection plate door fitting- **RC3 CERTIFIED**
 as per EN 1906.
 With integrated standard safety core drawing protection.

THREE 3-PIECE BARREL HINGES

As a standard feature, all entrance doors are equipped with three powerful and adjustable 3-piece barrel hinges in EV1 anodized version. The hinges are optionally available in 13 different colors.

KEEP BAR

The stainless steel keeps provide increased security and the adjustable feature of +/- 2 mm ensures higher bolting comfort.

The bolting bar is installed as a standard component in all lock combinations.

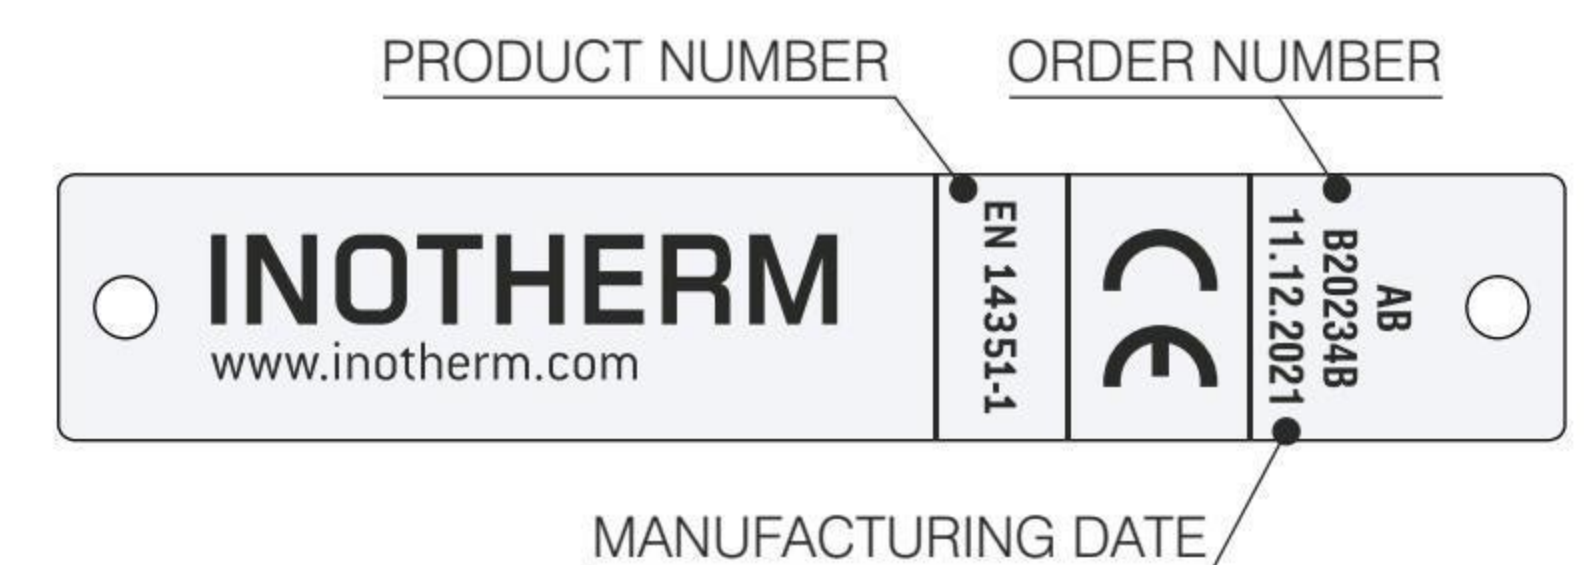

STANDARD PROFILE CYLINDER

K 20 / Standard cylinder with emergency and anti-lock-out function, 6 keys included.

PRODUCT INFORMATION

Each door in our program has a nameplate about the product. It contains all relevant information and technical information documentation on ordering and door manufacturing.

The data is engraved with a laser in a tile made of stainless steel. Engraving provides long legibility and usability of data.

FLOOR STATIC PROFILE

Floor static profile in EV1 with the positioning groove and the sealing tape as standard. Below with an optimal cross-section guarantees a fully dimensionally stable construction of our doors, which is very important for transport and a quick and accurate assembly installation.

New greatly improved frame and wing design with many several static points and **NEW WING THICKNESS 95mm.**

THE NEW CONSTRUCTION ACHIEVES PEAK VALUES

in all important areas: statics, thermal insulation, safety and ecology.

New dynamic design

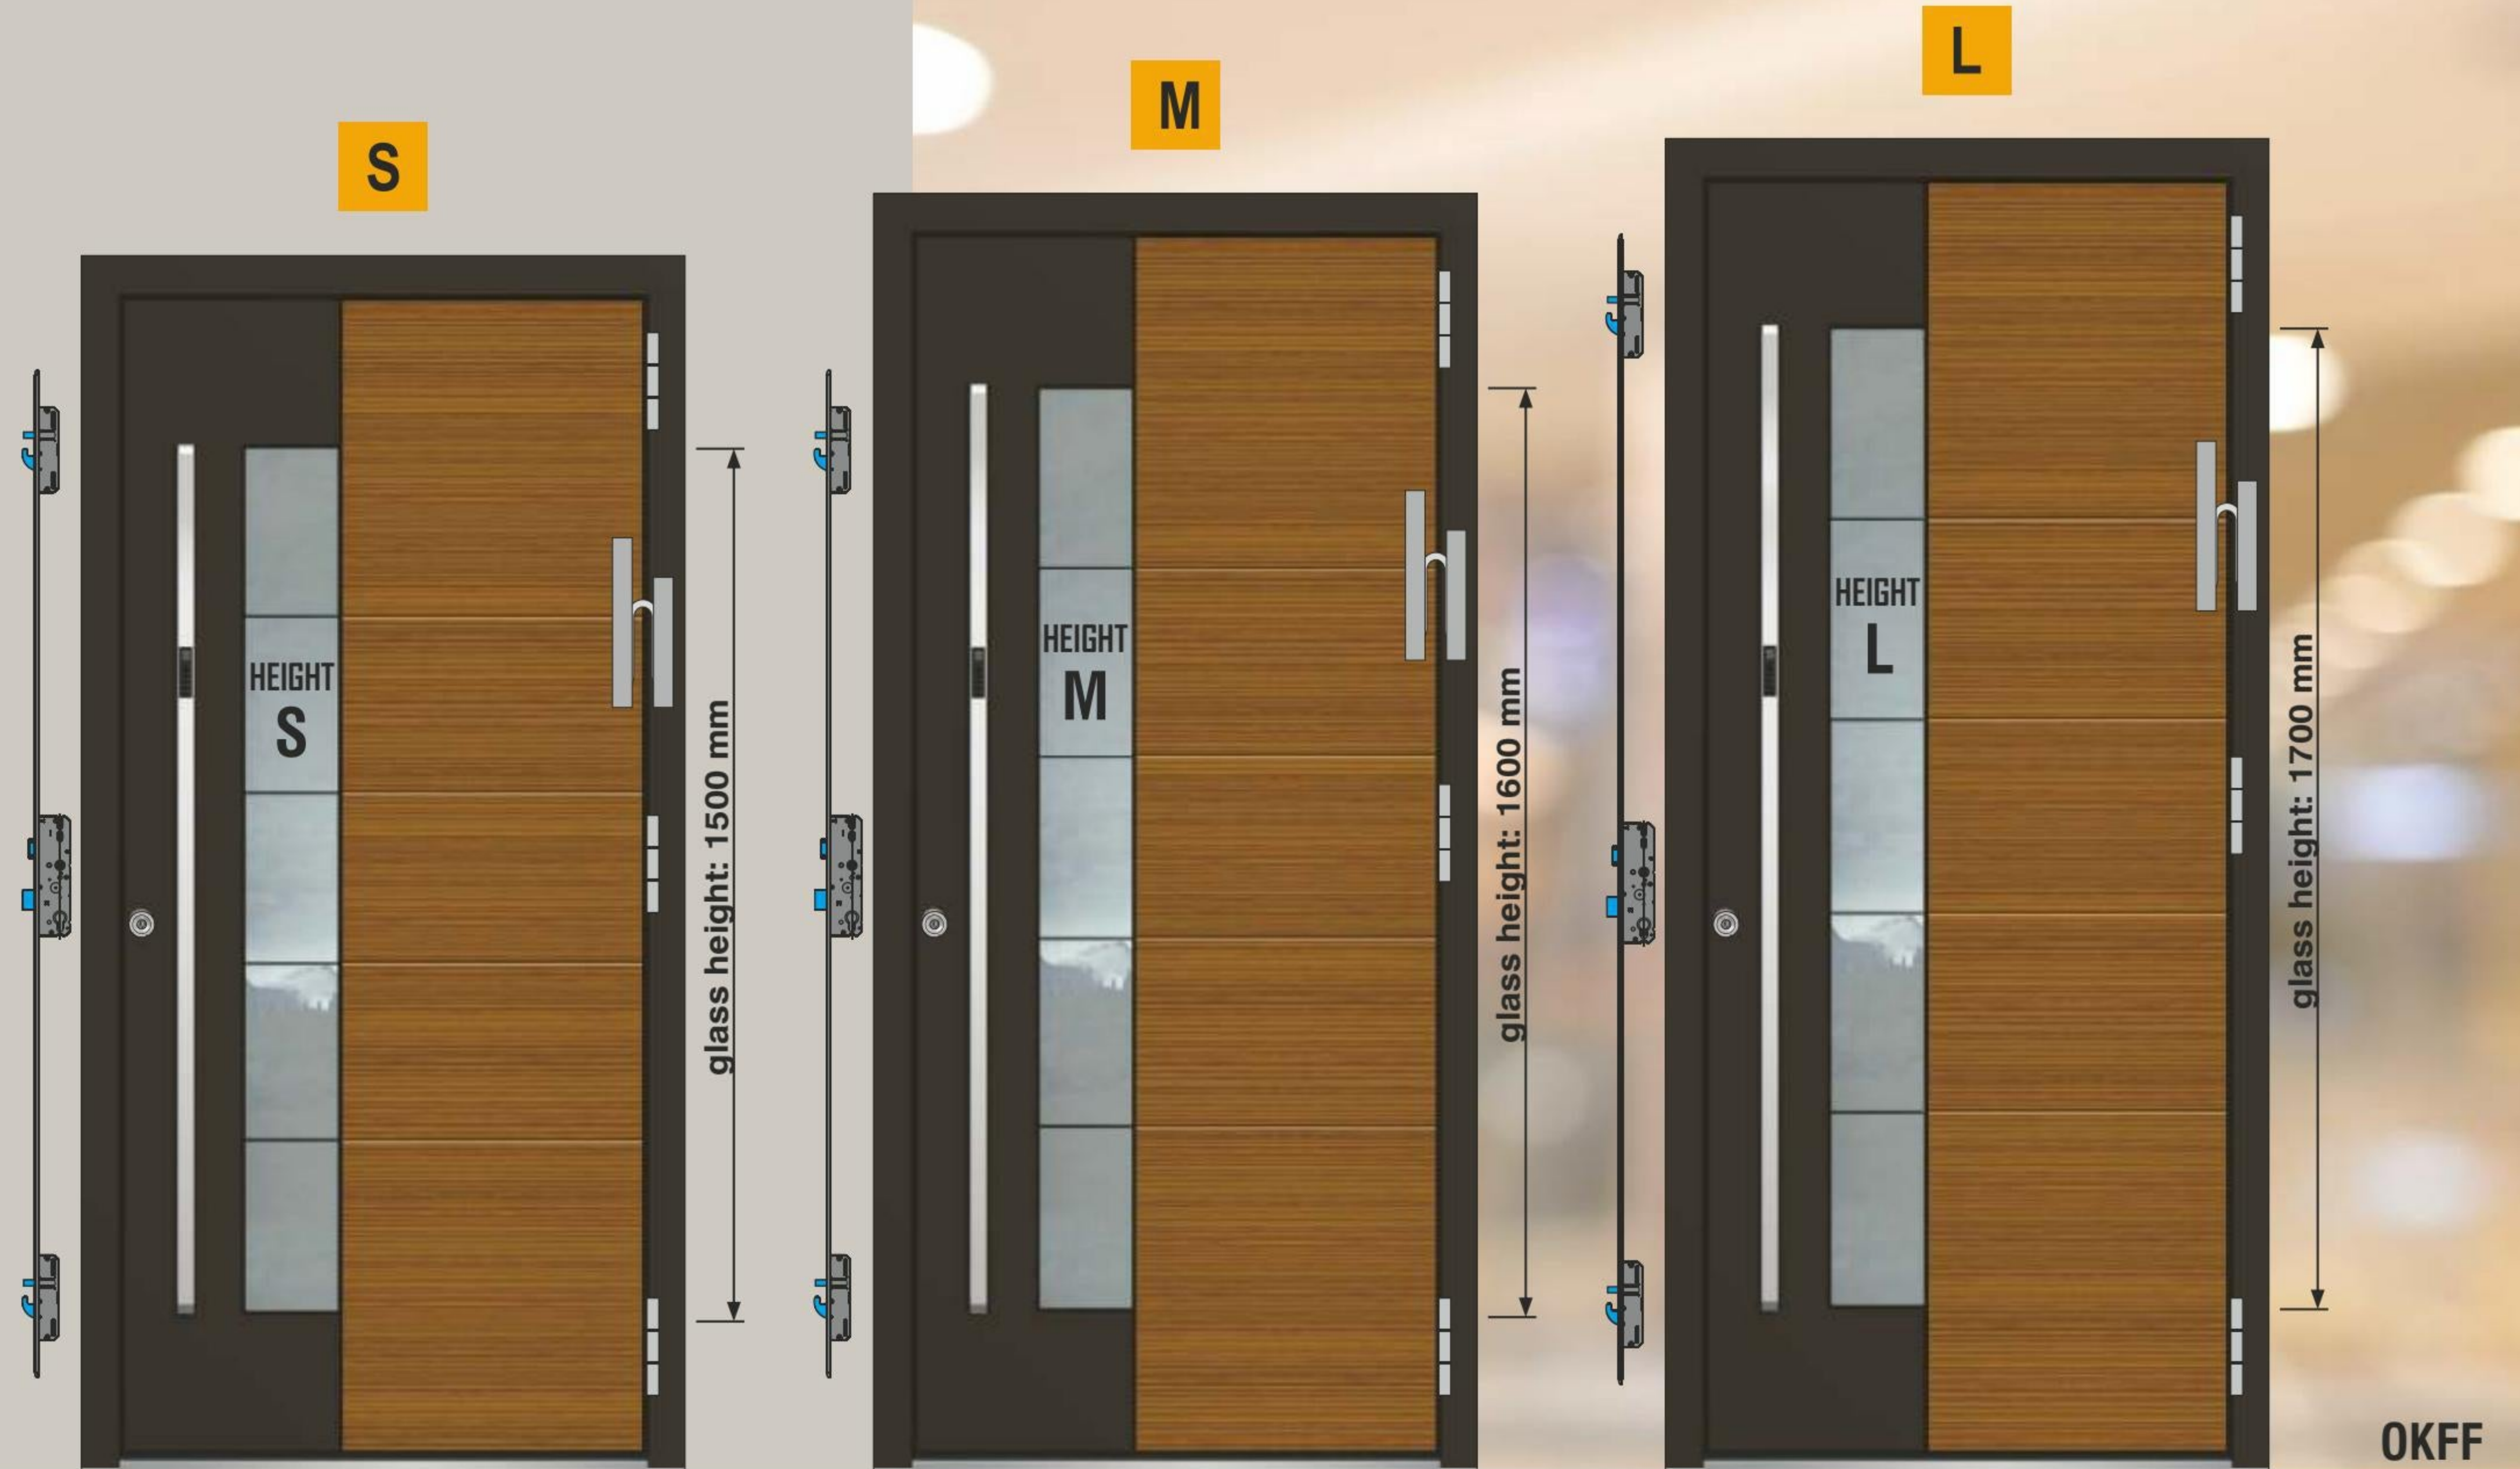

SMART DESIGN

FOR DOOR HEIGHT CHANGE

Thanks to optical-dynamic geometric adaptation, the glass is now adjusted to each specific door height free of charge. Hereby the entrance door design remains uniform and harmonious, even for larger door heights.

Modern construction increasingly demands doors of extraordinary dimensions, with structural stability being of great importance.

The exclusive range of entrance doors with unique technical solutions ensures smooth functionality even at a height from 2251 up to 2700 mm and a width of up to 1260 mm.

Top leaf

Design

TOP LEAF

A top leaf can provide an elegant solution for doors with heights from 2700 mm to 3200 mm (allowing dismantling if needed).

The same design as the basic door leaf gives the entrance door the look of a very modern and high door, while enabling it. Entrance doors with hidden top effortless entry and door opening.

The installation of top leaves is possible in all door models. The 5 mm spacing between the door leaf and top leaf will be incorporated in the element design to ensure optimal and continuous aesthetics.

EXCLUSIVE DOORS

Door stability

DOOR STABILITY

The impact of climatic conditions on aluminum entrance doors in winter and in the hot summer, the so-called Bimetallic effect can trigger an unpleasant leaf deformation, leading to difficulties in closing the door.

Our patented leaf design, the

DILATION LAYER

and an increased thermal bridge with a special U-value lock, ensure that the Exclusiv range has an optimal sealing function between the leaf and door frame. Our entrance doors can be used optimally even under extreme climatic conditions.

AG SERIES

Different model series for different tastes

AG Series - without ornamental frames.

Characterized by smooth surfaces and clean and simple lines.

Basic model shapes are simple, coherent, without superfluous extras, ensuring timelessness of the models.

The design of the series emphasises the quality of the finishing and incorporated materials and the product's technological perfection.

Strict controls throughout the fabrication process and final control of **EXCLUSIVE entrance doors** ensure low maintenance and an extremely long life.

You can add your own design note to all models from the **AG series** and with smaller or larger modifications, create an entirely unique **EXCLUSIVE entrance door** model.

NEW FEATURE!

Set the stage, and add an internal mirror to the inside of your door.

Made from indestructible, highly polished stainless steel. It's not just about looks, combining a mirror with your internal décor will add visual depth to any hallway.

Instead of using fragile glass, our mirrors are made from indestructible, highly polished stainless steel - no need to worry about seven years of bad luck!

The reflection from mechanically polished stainless steel is nearly identical to an actual mirror and is mounted flush with the internal skin. It can be positioned either in the middle of the door or offset, towards the edge of the sash.

NEW FEATURE!
Set the stage, and add an internal mirror to the inside of your door. Made from indestructible, highly polished stainless steel.

AE SERIES

Different model series for different tastes

AE Series - with stainless steel ornamental frames.

A characteristic of the **AE series** is the sharp line between the glass and aluminium, highlighted by the stainless steel frame. The stylish trim of the stainless steel frame on the door's interior and exterior ensures the high recognisability of **AE series** models.

The design of the series emphasises the quality of the finishing and incorporated materials and the product's technological perfection.

Strict controls throughout the fabrication process and final control of **EXCLUSIVE entrance doors** ensure low maintenance and an extremely long life.

You can add your own design note to all models from the **AE series** through bespoke modifications and create an entirely unique **EXCLUSIVE entrance door** model.

art SERIES

Different model series for different tastes

ART Series - special models.

The **ART series** is something special.

A combination of several different materials, such as aluminium, stainless steel and tempered glass. Together they form distinct lines, giving the entrance door a special touch.

For people with a strong, specific style and taste. The models are largely adapted to the dimensions of the door, acquiring their essential appearance even under extreme deviations from the mean.

The design of the series emphasises the quality of the finishing and incorporated materials and the product's technological perfection. Strict controls throughout the fabrication process and final control of **EXCLUSIVE entrance doors** ensure low maintenance and an extremely long life. You can add your own design note to all models from the **ART series** through bespoke larger modifications and create an entirely unique **EXCLUSIVE entrance door** model.

AT SERIES

Different model series for different tastes

AT Series - with aluminium ornamental frames.

The **AT series** is based on classic, traditional designs, consistent with a timeless architectural environment.

The carefully selected shapes and details create the beautiful, elegant rustic shape of the entrance door.

The design of the series emphasises the quality of the finishing and incorporated materials and the product's technological perfection.

Strict controls throughout the fabrication process and final control of **EXCLUSIVE entrance doors** ensure low maintenance and an extremely long life.

You can add your own design note to all models from the **AT series** through bespoke modifications and create an entirely unique **EXCLUSIVE entrance door** model.

INOTHERM Aluminium Flashing

For a seamless finish between the door and external wall, we recommend our Aluminium Flashing Kit LP 200.

The built-in LED illumination elegantly adds that subtly extra bit of curb appeal to any entrance.

The new Flashing Kit is installed at production stage, guaranteeing a safe and efficient transport solution, and an easy fit when on site.

BT 19 E - Electronic door viewer interior unit

Exterior unit

Equipped with a camera and a LCD colour monitor, the electronic door viewer shows you who is at the door by pressing a button.

ADVANTAGES:

- More security for the residents - nobody can detect from outside whether there is someone at the door viewer
- Clear images on the screen
- Highly sensitive camera with night vision sensitive camera
- Simple USB port charging
- Simultaneous observation of the monitor screen is possible by more than one person
- Easy operation for children and seniors
- Option of photo shooting and video recording

SIMPLE USE:

After pressing the button the screen turns on for 10 seconds. The battery reminder on the screen  indicates when charging is necessary.

EXCLUSIVE DOORS

Multipurpose doors

The front doors from the multipurpose program are a supplement to our front door program. These are conceived as a second door (for garages, gardens, boiler rooms, etc.).

The advantage of multi-purpose doors lies in the low price and in the matching overall object optics. Also, using the same key with other doors of the object is possible. Maximum dimensions: Width up to 1160mm, height up to 2250mm.

The models cannot be modified and are only executable as basic models.

Opening type outwards

AT 95 A

All inward-opening models of the EXCLUSIV series are also available as outward-opening versions.

It is important to note that the outward-opening version also has the same properties, characteristics and finish as the basic EXCLUSIV program. Doors that open outwards retain the same appearance, as do the possible optional accessories as for doors that open inwards.

The floor static profile is also a standard feature of the doors, opening outwards, which ensures perfect door statics, safe transport and perfectly flawless assembly.

F3 - COLOUR GROUP 3: WOOD DÉCOR MATT (surcharge)

OUTSIDE VIEW

SUBLIMATED WOOD AND DESIGN DECORS

The wood and design decorations are made in the process of sublimation. The wood grain design (or other designs) is transferred from a carrier film onto the powder-coated surface and impressed into the base with the help of vacuum and temperatures over 200°C. The transfer film is then removed to reveal a beautifully detailed imitation of specific wood types or other designs.

40 AVAILABLE DÉCORS

With a few exceptions, most of the models are available in one of our 40 different décors, varying from light to dark, subtle to strong. The door can be fully coated – or only partially, to complement another colour.

EXCLUSIVE DOORS

OUTSIDE VIEW

F3 - COLOUR GROUP 3: DESIGN DECOR (surcharge)

F3 - COLOUR GROUP 3: WOOD DECOR HIGH-GLOSS (surcharge)

COLORED SURFACES

The assessment of the coating quality in accordance with the RAL quality assurance (RAL RG 631) must be done without any aids and at a distance of 5 m for exterior components and at a distance of 3m for interior components. Minor spots, scratches, traces of sanding and welded seams that are not clearly visible from these distances do not represent any defect and thus, also no reason for complaints.

SILIKON - STANDARD COLOUR

Glass sealing in entrance door fillings is in **dark anthracite – black** color by default compatible with the warm edge of the spacer.

SAFETY MECHANISM

Rotary knob with rectangular pin operating the door-opening lock

Opening doors without any risk!

TSH is the additional protection that you can rely on.

No peephole necessary.
No chain necessary.
No scratches and no damage to the chain.

OPTIONAL BTS 5 TSH

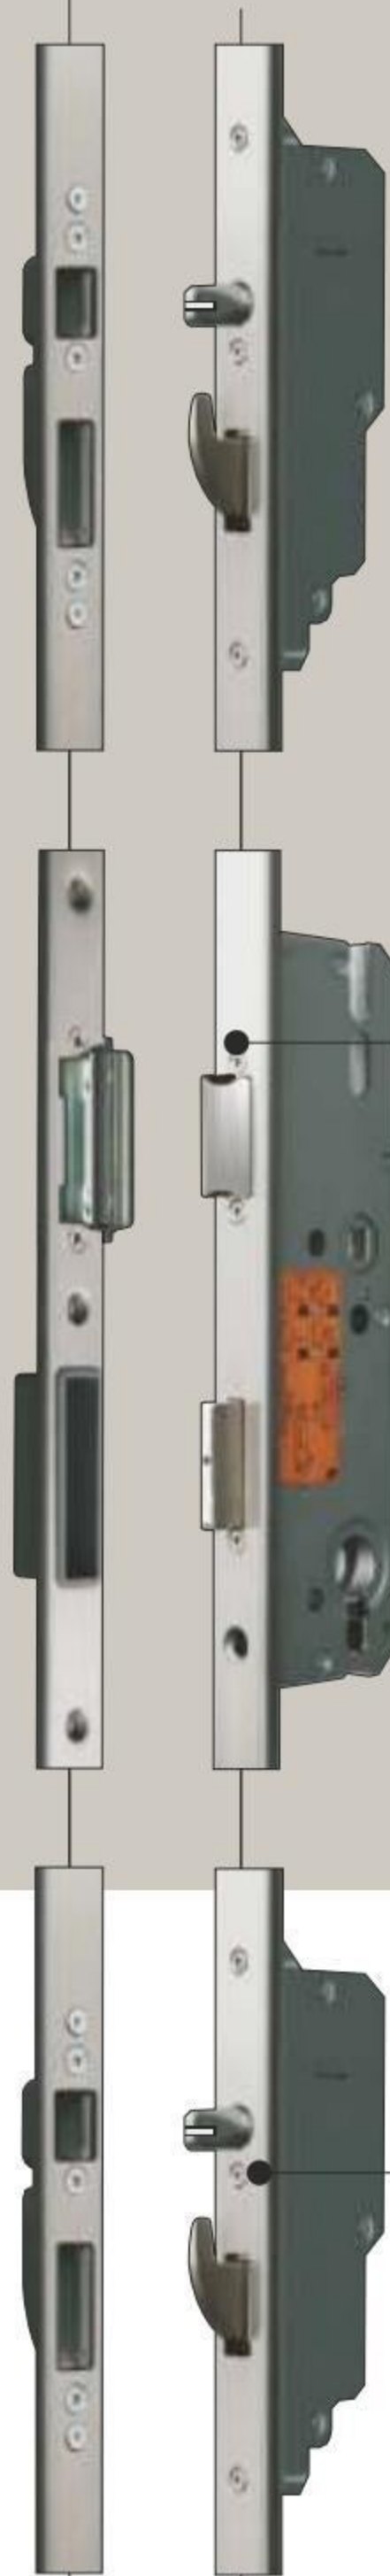

6-point lock with bolts and hooks with door gap restrictor
Stainless steel

FOR SIZES: S / M / L / XL / XXL / JUMBO

OPTIONAL ATM 6

5 point motor locking system with bolts and hooks
Stainless steel

FOR SIZES: S / M / L / XL / XXL / JUMBO

AUTOMATIC LOCKING SYSTEM

Four locking elements are triggered mechanically as the door leaf comes in contact with the keep plate in frame.

Using the lever handle or key, the locking elements unblock and the door can be opened.

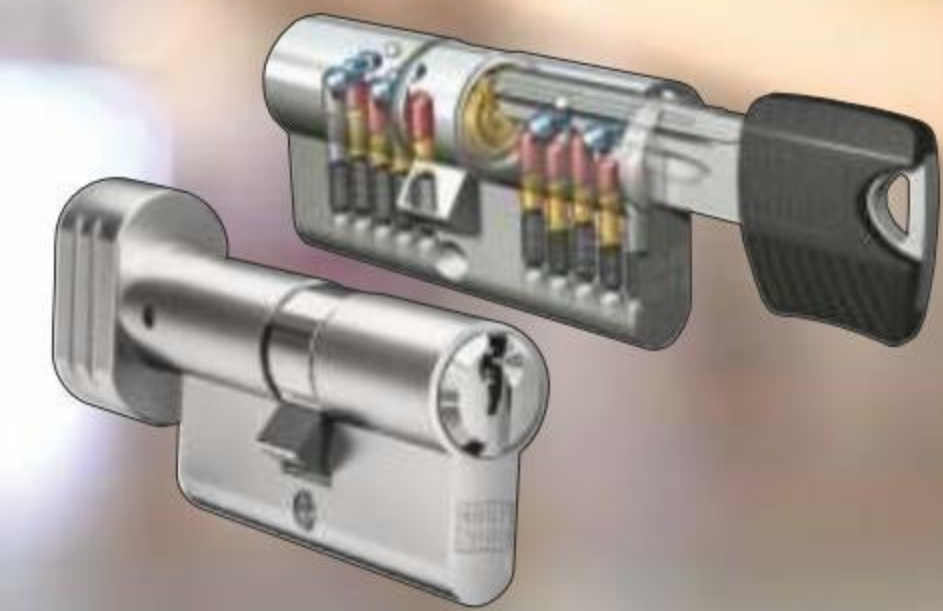

Additionally, the cylinder can be locked as well to ensure an even higher security.

DAY/NIGHT MODE

The desired mode (day or night) can be selected using the toggle switch on the GENIUS door lock.

Day mode - LED lights up white

- The door is held shut by the latch..
- To allow the door to open, the latch retracts into the lock.
- This mode is recommended for doors with heavy traffic.

Night mode - LED lights up blue

- The door is locked automatically after each opening.
- When the door is opened it is also unlocked automatically.
- The latch retracts into the lock for approximately 7 seconds. If the door is not opened during this time, it is locked again after these 7 seconds have elapsed.

Note: If the door needs to be locked (e.g. at night, or when the building is empty), night mode must be selected.

OPTIONAL (surcharge): DAILY FUNCTION

Daily switching function is possible in combination with el. door opener BT 7

- Switch the lock on daily operation.
- El. switch open to the day-time switch function - up or down shift switch.

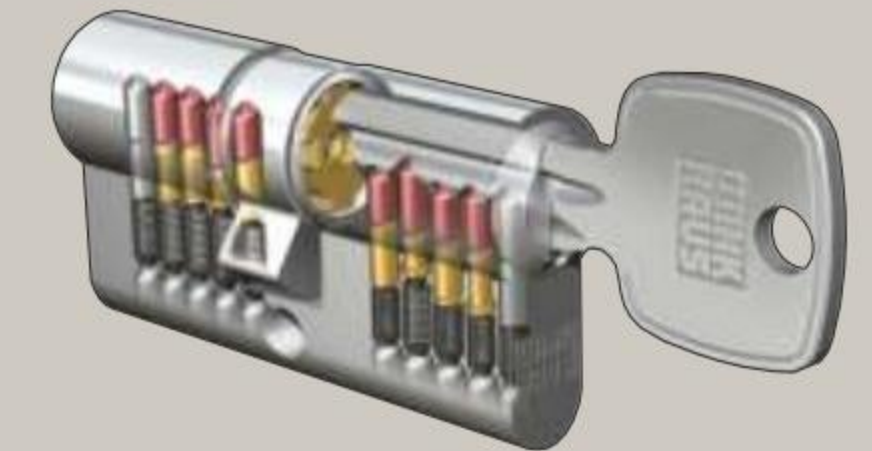

FUSE BOX

Fuse box with built-in transformer 24 V/220 V, with automatic power connection 230 V, AC 50/60 Hz. Prepared for intercom and second relay.

GENIUS-SYSTEM

Complete inoSmart

- 5-point locking swing bolt with an electromechanical drive made from stainless steel
- End-to-end keep-plate
- FZG (Free-running cylinder for motor locking systems) including 6 keys

- Day / night operation
- Finger scanner with Keypad, NFC (Smartphone)
- Exterior safety rosette
- Management through smartphone application (Android or Apple)
- Cable transition with control unit

As soon as the entrance door is closed, it is locked automatically. It is unlocked either via its cylinder keys or comfortably with fingerprint operation.

In addition, the quick opening mechanism **GENIUS COMFORT** is installed that enables the Genius to be opened easily with the help of the pusher on the inside of the door.

OPTIONAL BT 1020 Comfort

As soon as the leaf is closed, the locking system automatically locks all 5 points with a motor. From the inside, the door can always be opened just by using the lever handle or via intercom signal.

From the outside it can be unlocked via keys, INOSMART System or other signal carriers.

NEW!
FINGERPRINT ANALYSIS

EXCLUSIVE DOORS

WHAT IS IT?

We present you the new generation of the INOSMART fingerprint reader, which promise quality, safety and comfort just like the excellent Inotherm house doors. It is an indispensable part of the house doors. The INOSMART fingerprint reader facilitates convenient and safe entry into the house for the whole family and helps set aside worries for lost keys.

HOW DOES IT WORK?

The INOSMART fingerprint reader of the new generation can now be installed in the door wing or stainless steel push handle. There are no keys or other moving parts on the fingerprint reader. The functions are executed by means of the keys on the control unit, which is installed in the door wing for the cable transition. The connection between the fingerprint reader and the control unit is additionally protected using an encryption standard of the best quality, such that an electronic abuse of the installation is practically impossible.

This is a big advantage compared to the tension sensors, for which you must be aware of how quickly and from which angle you press the finger on the sensor.

AND THE SECURITY?

The new fingerprint sensor provides additional security and faster action with the 3D technology and the new algorithm for recognition of fingerprints, which even enables a faster and more reliable function. It is impossible to get the fingerprint image from this code again. Everything is however still additionally encrypted using the control unit, such that misuse is practically impossible.

IS THAT ALL?

INOSMART has 2 relay outputs; the first one opens the door in which it is installed, while the second one can open other doors, for example, open the garage door or triggers another electrical device. During registration, the relay that gets triggered is specified for each finger. With the specific finger, even both relays can be triggered simultaneously, which can be used for a silent alarm in case of abduction.

WOULD YOU LIKE TO DO MORE THAN MERELY OPEN THE DOOR?

INOSMART wireless remote control is a device, that combines the receiver for opening the door with the remote control and doorbell button. Like all other INOSMART devices, even this has 2 relay outputs. You can use the INOSMART wireless remote control to operate up to 7 remote controls and with the wireless doorbell button the wireless doorbell is triggered inside the house.

IS MY PERSONAL FINGERPRINT A RELIABLE OPTION FOR BIOMETRIC IDENTIFICATION?

Every fingerprint is different, and our skin is constantly adapting. Small injuries, dry skin or skin conditions can be a challenge for a biometric system in severe cases. The homeowner can now use the Inosmart-APP to analyse their individual prints and ensure their fingerprints are fully compatible for complete peace of mind.

- ADVANTAGES OF POLISHED STAINLESS STEEL**
- Hygienic
 - Easy to maintain
 - Acid, fat and moisture resistant
 - Exclusive look
 - Load bearing, stable and durable

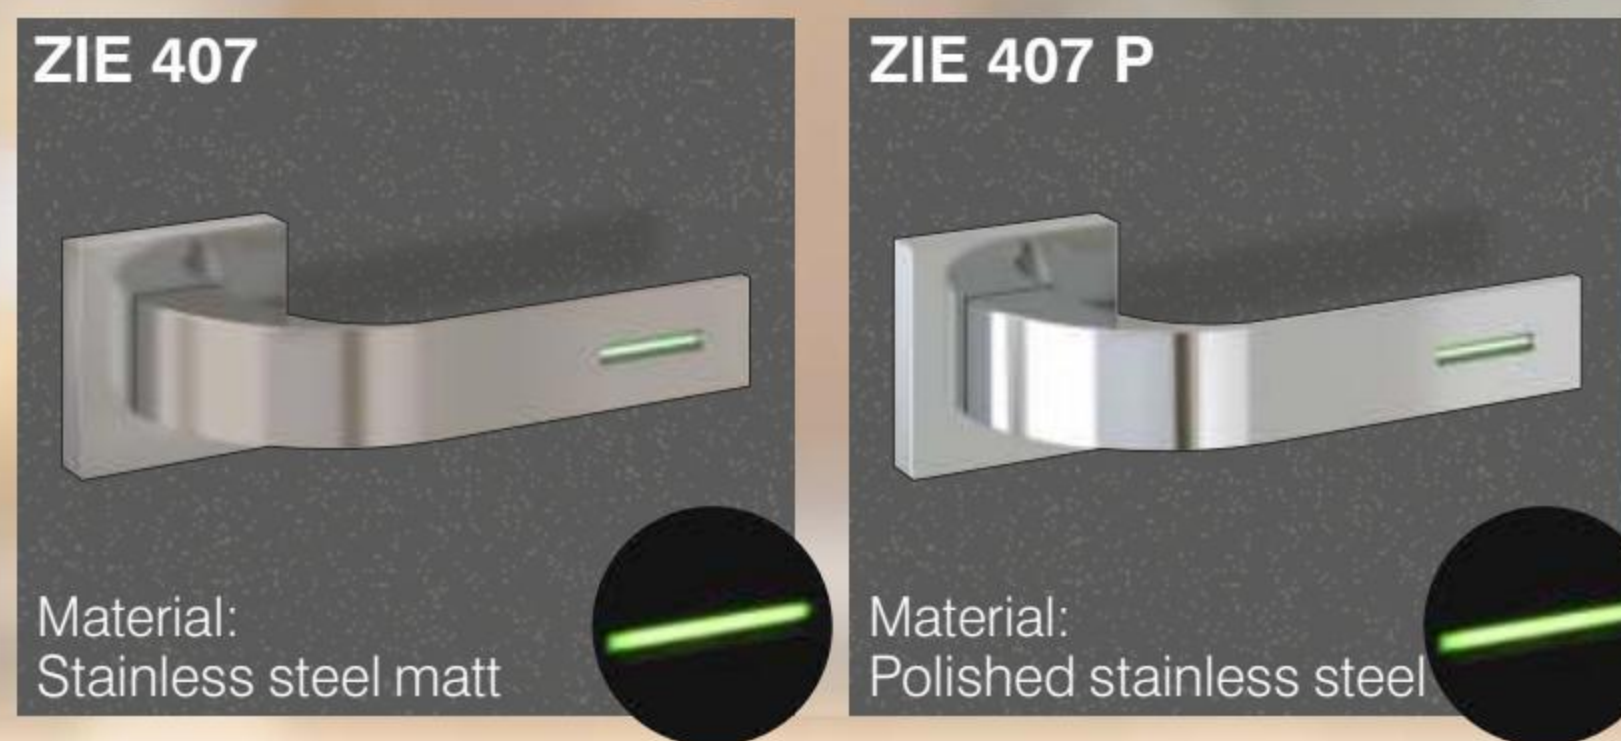

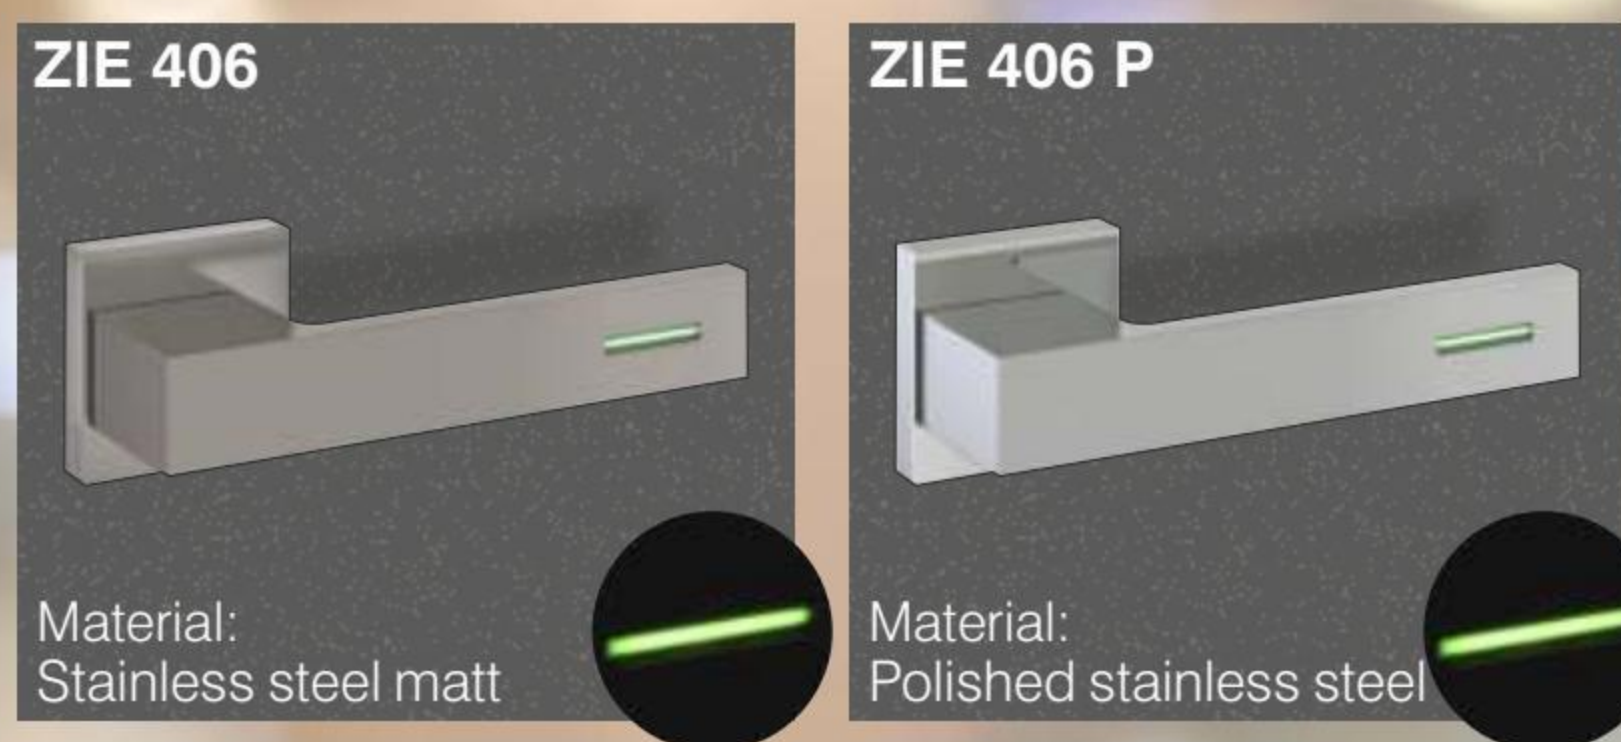

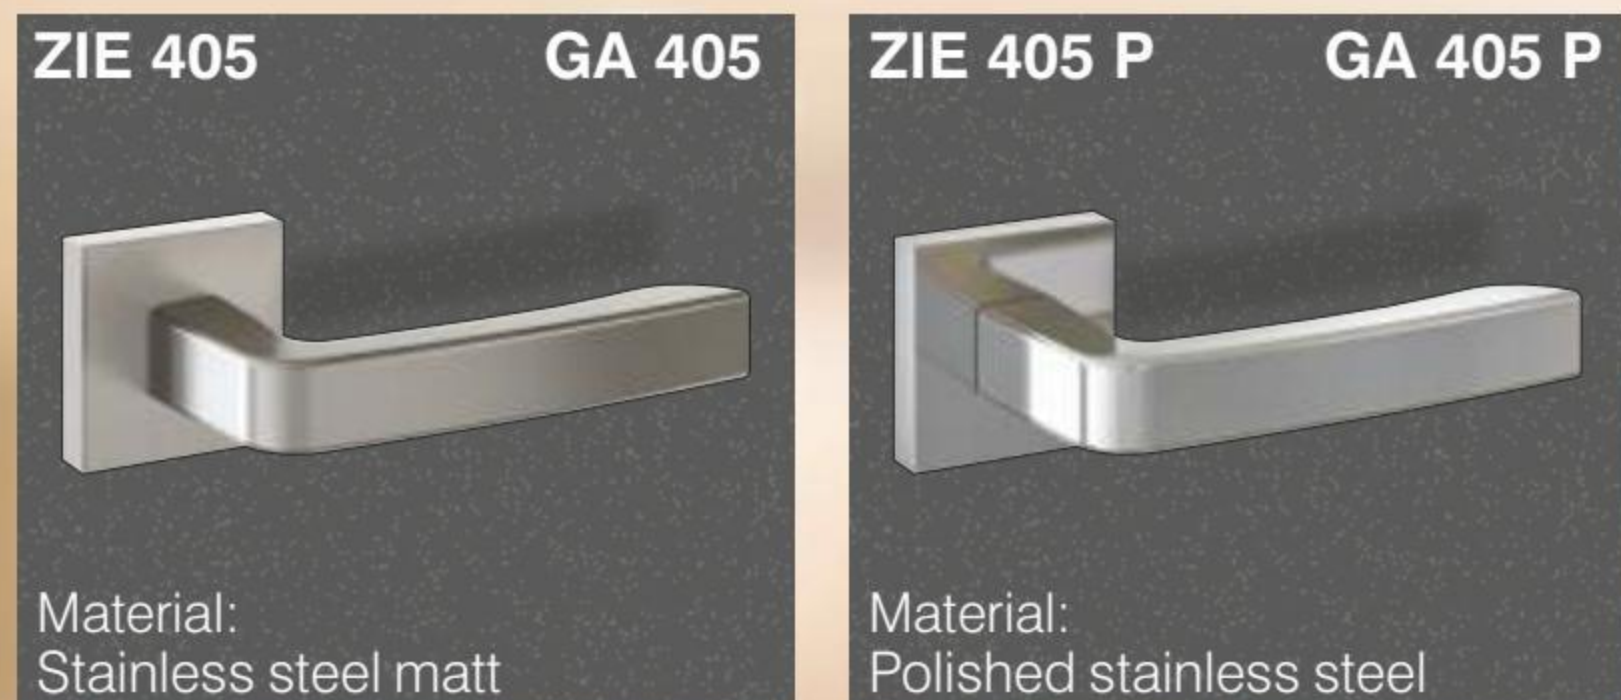

INOTHERM entrance doors come with a standard polished safety handle set: Knob on the outside, lever handle on the inside.
 Optionally: Lever handle on both sides.
 The handle sets are also available in stainless steel, PVD gold, varnished white or black.

The handle sets have a standard built-in safety guard and a high quality, state-of-the-art bearing spindle mechanism, which allows an unlimited use and durability of the handles.

ABSOLUTELY PERFECT FIT QUALITY IN THE HAND

With the EXCLUSIV series it is possible to replace the standard half-set inside, with the interior lever handles of the Design series.

The workmanship of the new interior lever handles is of the highest quality, made in matt stainless steel. The new built-in ball bearing pin mechanism allows unlimited use and strength.

The production of the inside handles is of the highest quality and technically perfect. A special shade of your choice, which will be adapted to the door models, is possible.

The focus is thus exclusively on the door handle. The contemporary architecture is minimalist, limiting itself to the essentials. Superfluous details are left out. That is why the NEW DESIGN interior lever handles are a perfect match for contemporary architecture.

NEW STATIC WIDENING ELEMENTS

The models from the Exclusiv program are appropriate for installation in modern new buildings, as well as for the renovation of existing buildings. The supplementary program Widening elements enable the completion of the front door shape even for the most demanding installation. All widening elements are exceptionally stable with strong thermal insulation and are available in widths from 241 to 800 mm. High-quality finishing is possible in all directions.

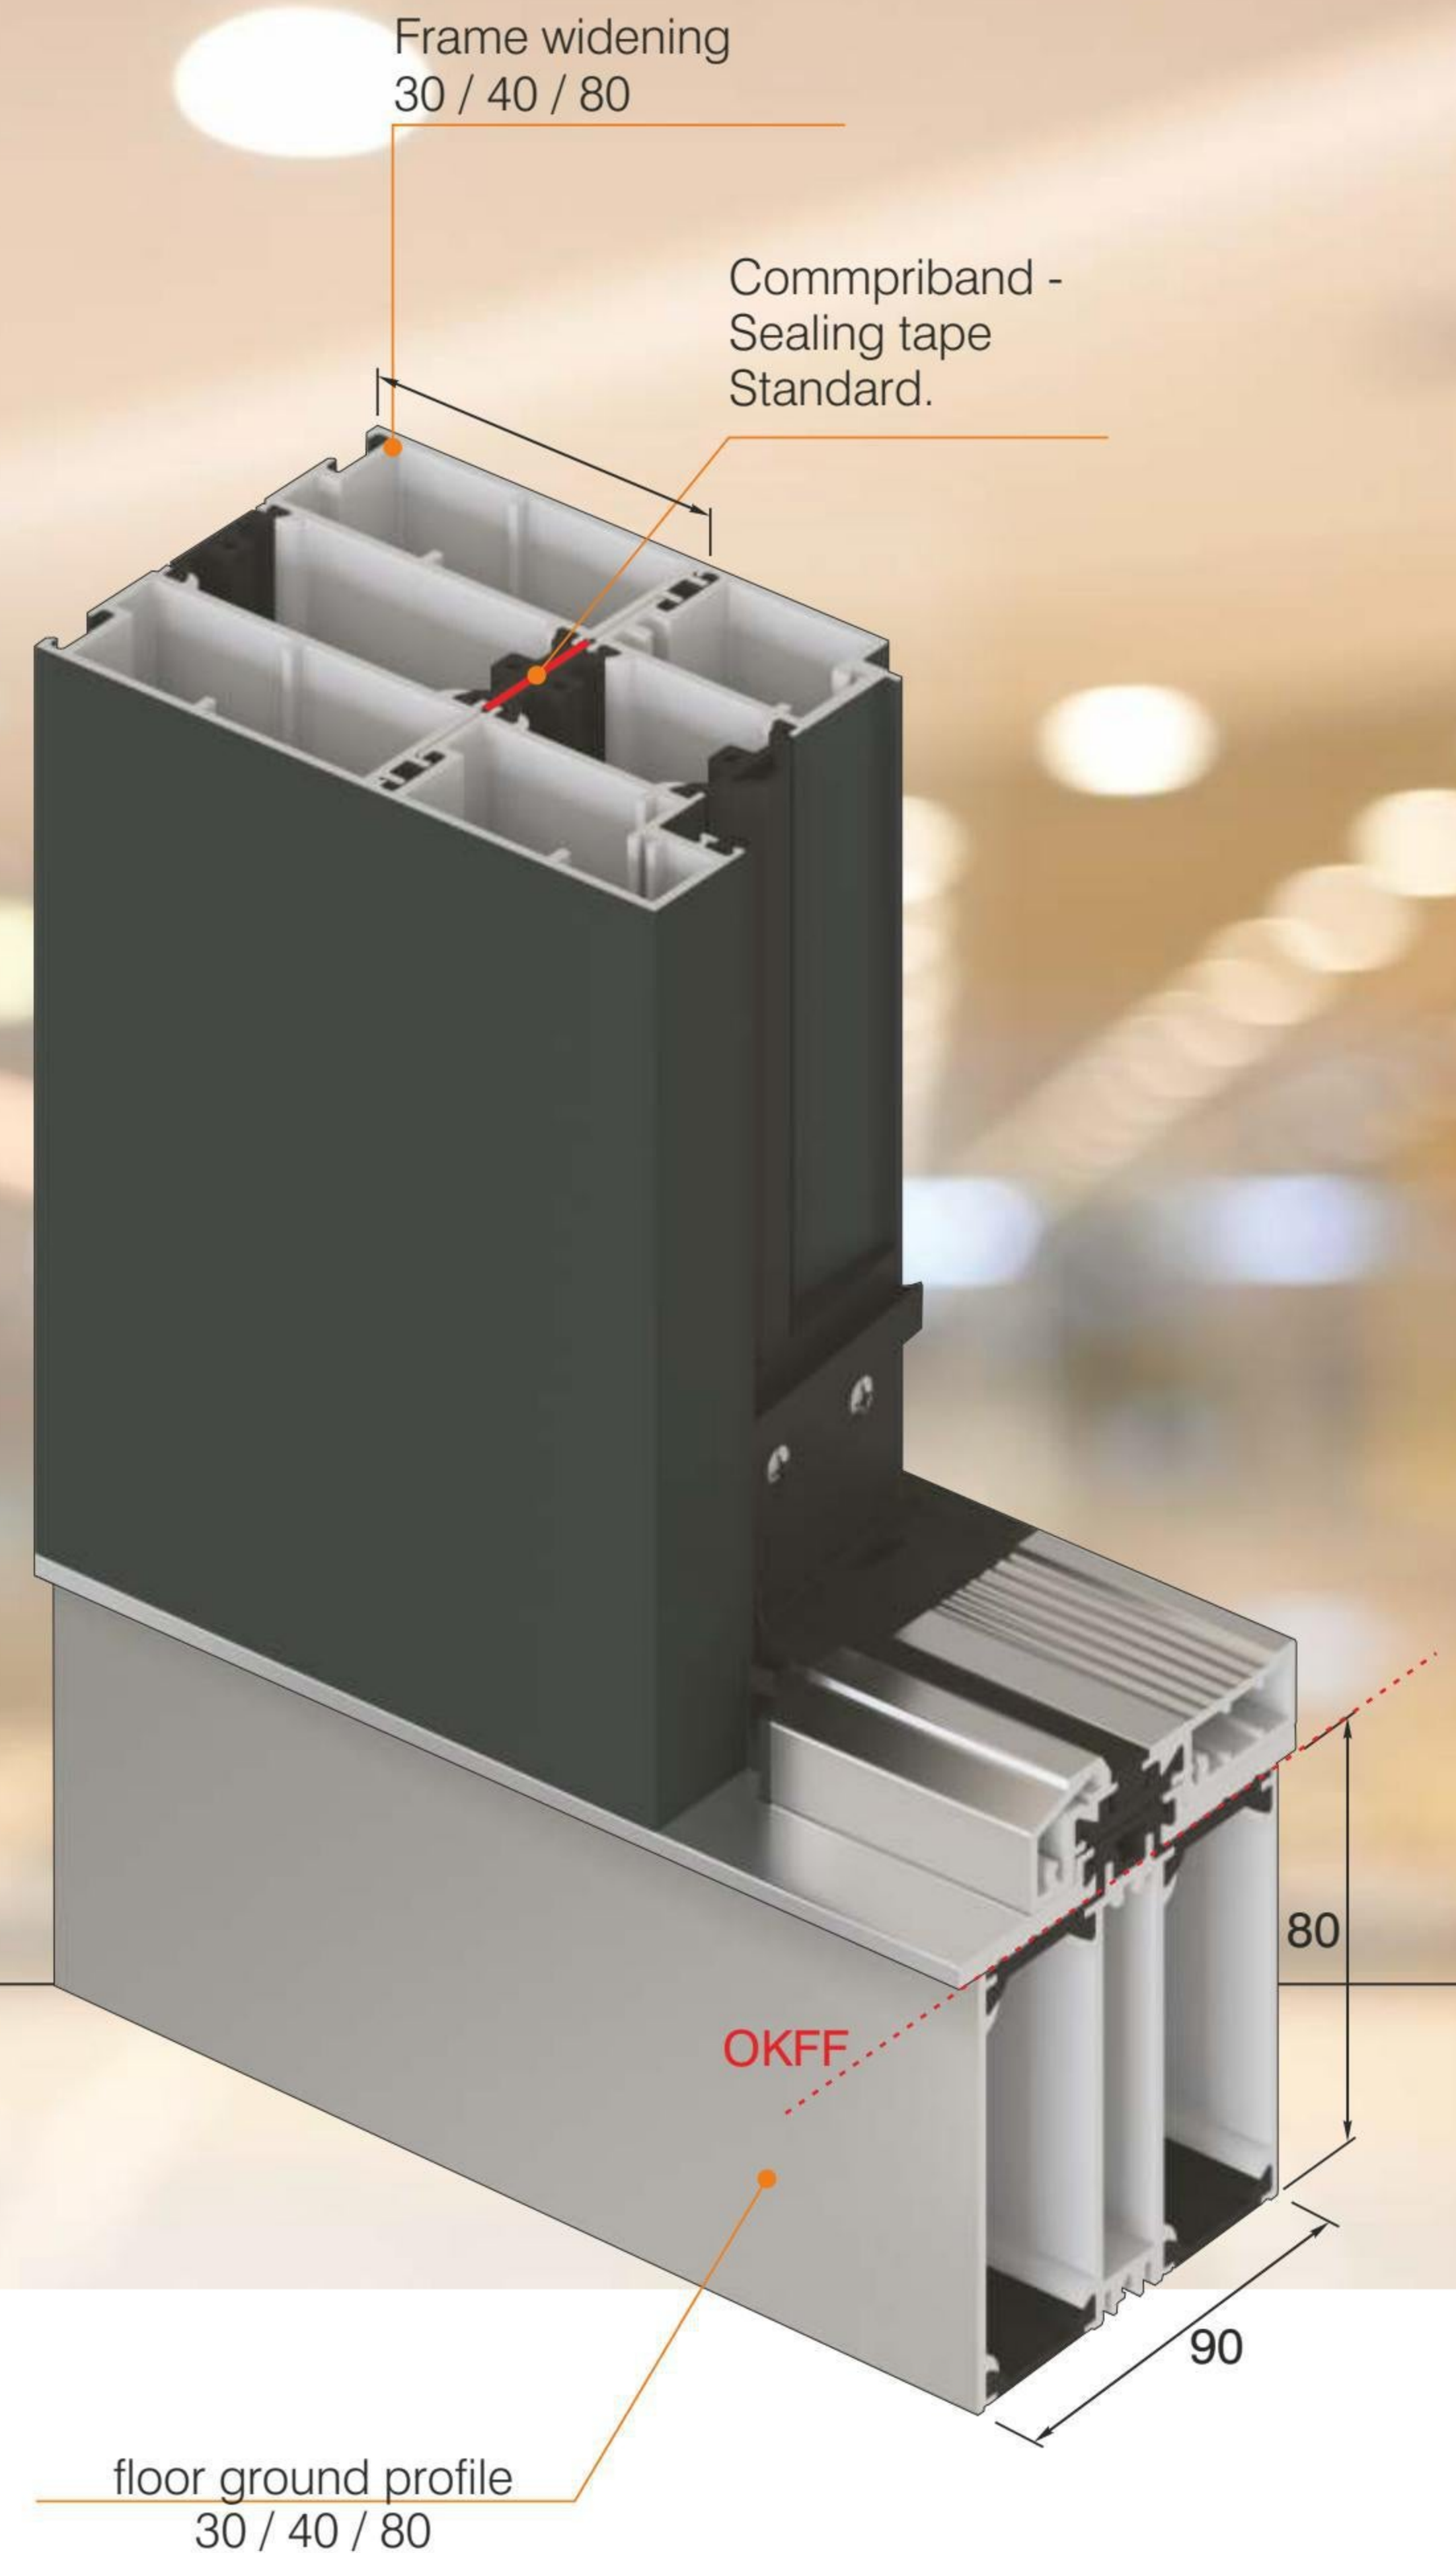

FLOOR GROUND PROFILE 30 / 40 / 80 mm

Solid, extremely stable and 2x thermally separated floor ground profile made of anodised 2.3mm aluminum is used underneath the floor static profile. The floor ground profile enables an optimal, simple and stable front door installation on the unfinished floor and provides thermal separation between the interior and exterior of the soil structure and prevents a co-called cold bridge.

Technische Hinweise

New automatic door seal not only achieves great results in terms of accessibility, but also offers maximum stability.

Today we are experiencing that the requirements to barrier-free planning, building and living are increasingly becoming a focus of attention. However, despite accessibility, especially at exterior doors, neither wind and driving rain nor noise must be allowed to penetrate into the interior rooms.

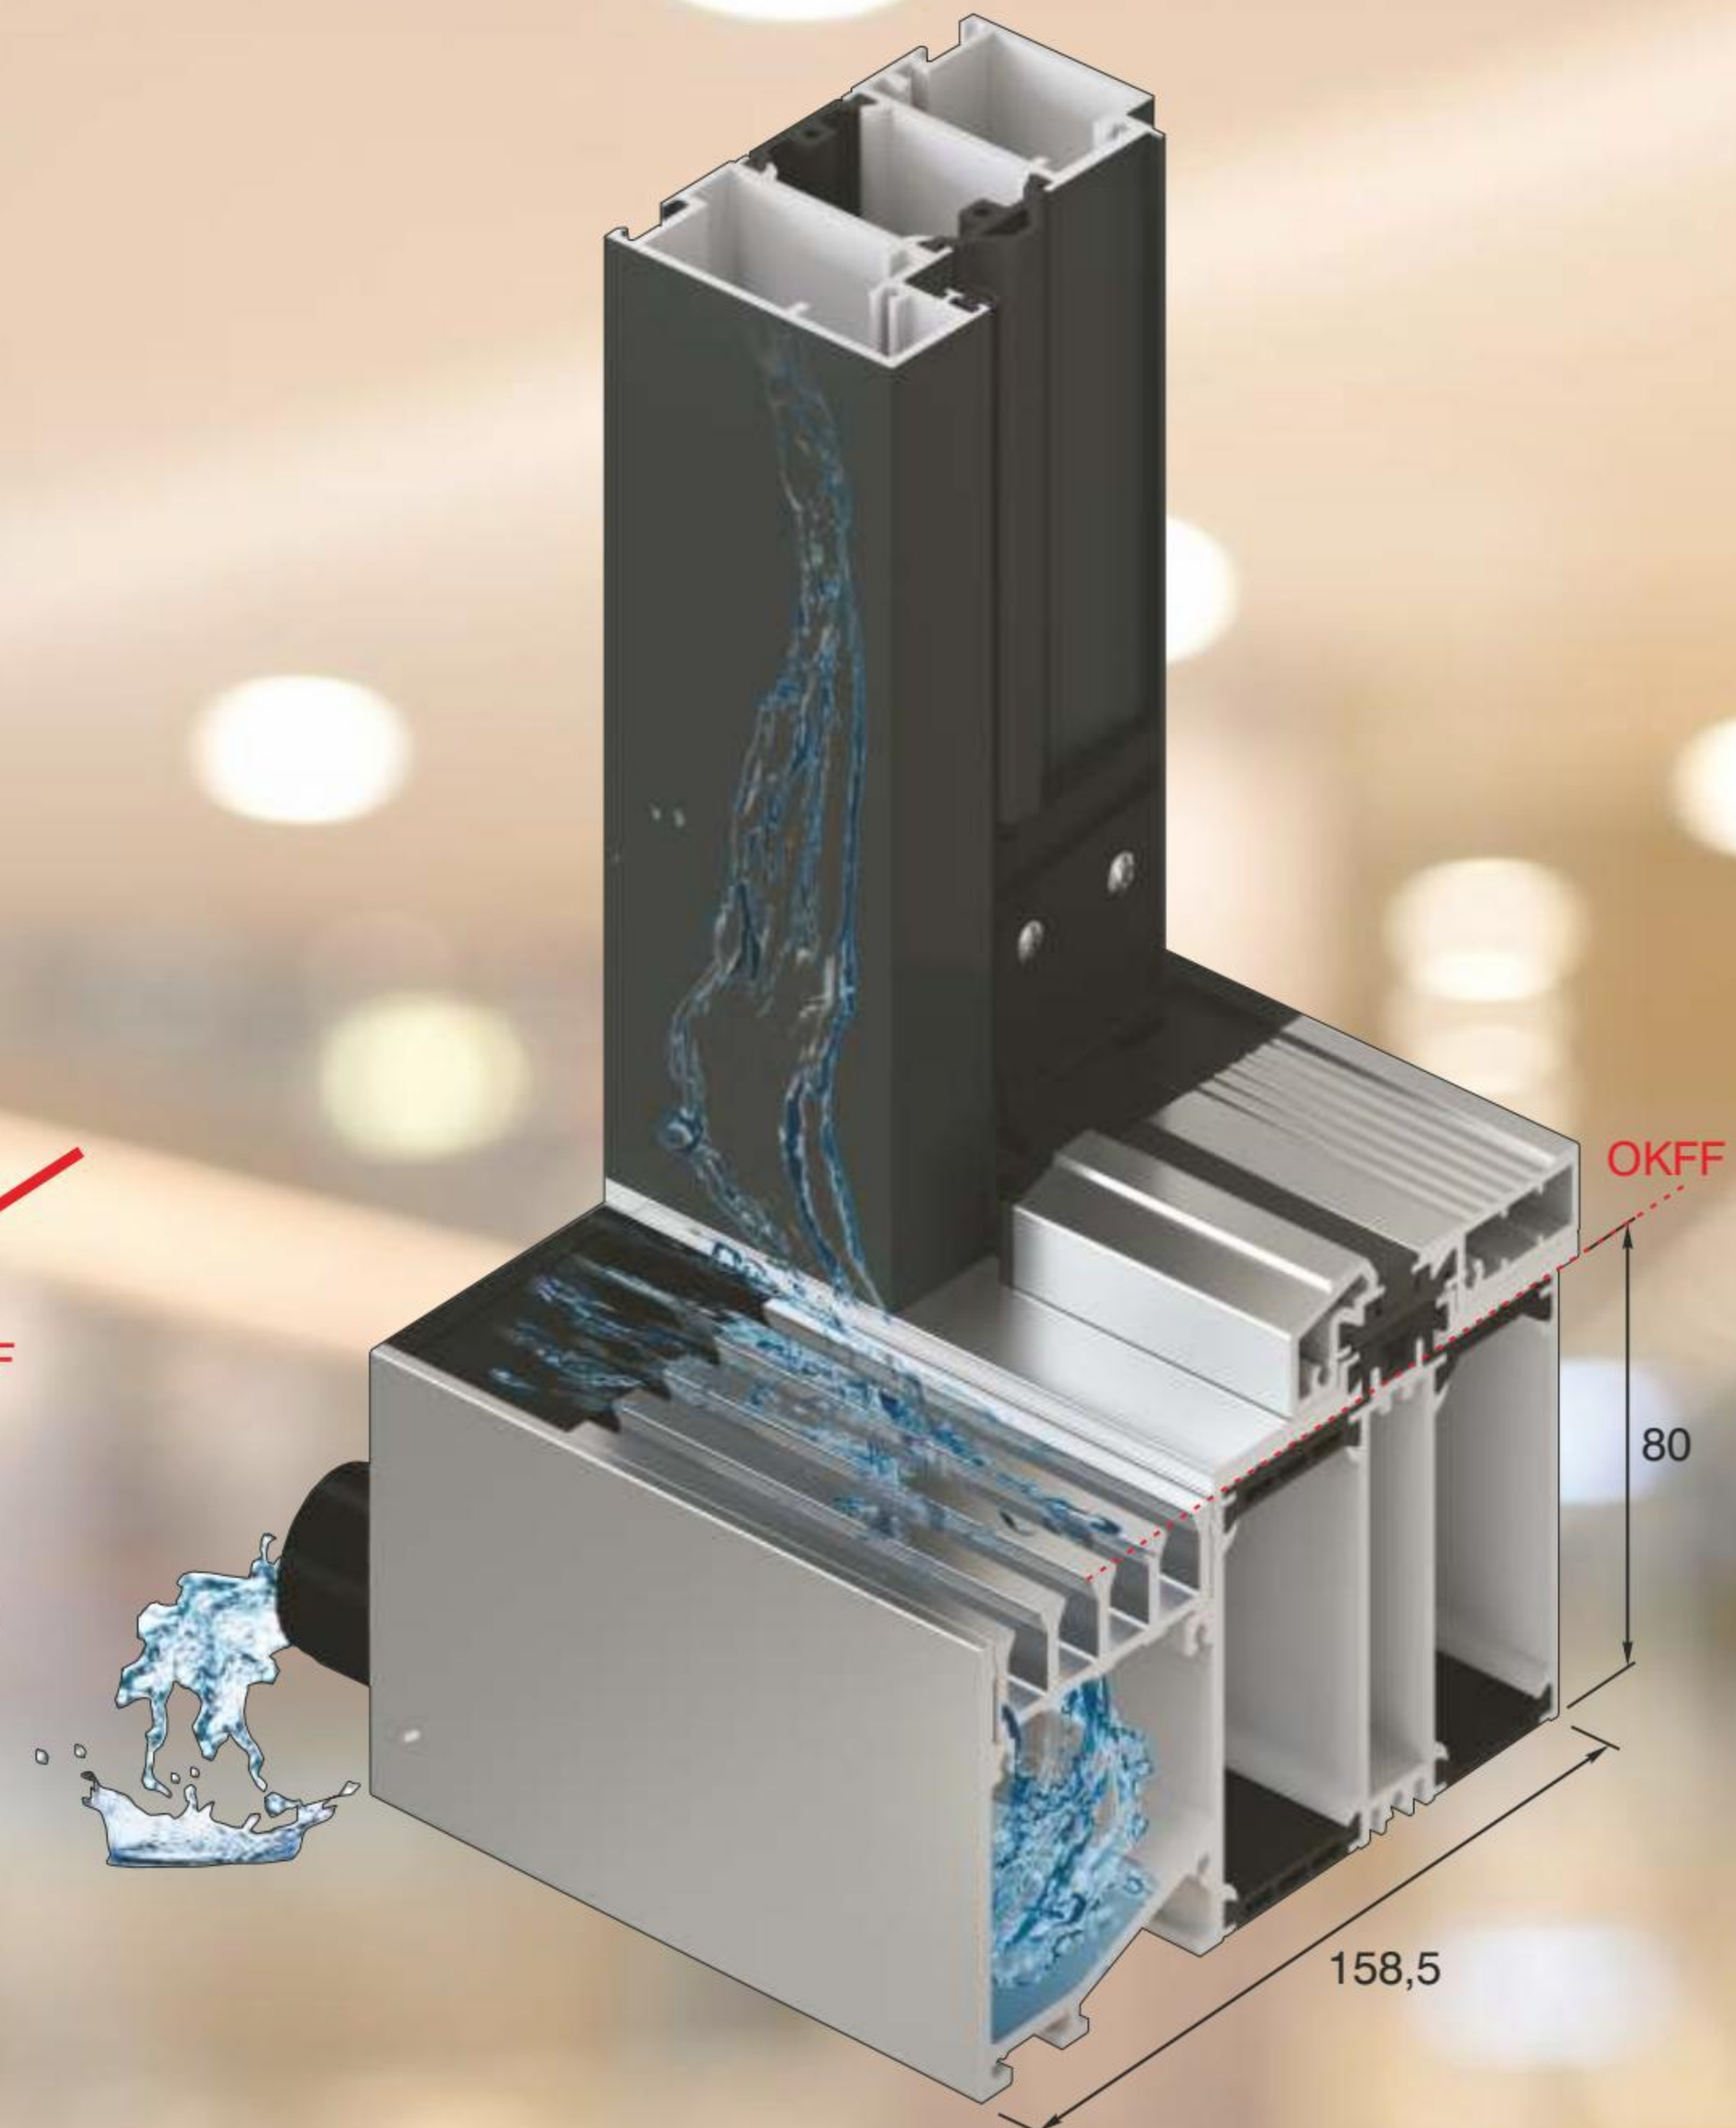

With the new automatic door seal, INOTHERM is launching a door seal that meets all the above requirements. New automatic door seal based on the philosophy of mechanics, which brings the following plus points: Front door construction.

- Significantly improved sealing system and thus driving rain tightness, resistance to wind load and sound insulation value
- Easy maintenance, easy disassembly of the inner rail for changing the sealing profile
- Toolless adjustment
- Parallel lowering, automatic level compensation, overload protection
- Automatic height compensation
- Accessibility, lower release forces
- The front door is equipped as standard with the floor static profile connected/next to the accessibility, this also offers maximum stability of the front door construction

NEW AUTOMATIC DOOR SEAL

DRAINAGE CHANNEL 80 mm

Inotherm high-quality drainage channel offers a controlled drainage in front of your entrance. The drainage channel ensures that water can be reliably kept away from the front door.

Pros:

- Safe and fast drainage even of large quantities of water
- Avoidance of water puddles in the facade area
- Protection of the interior from moisture penetration
- Use for maintenance and care

CONCEALED DOOR HINGES

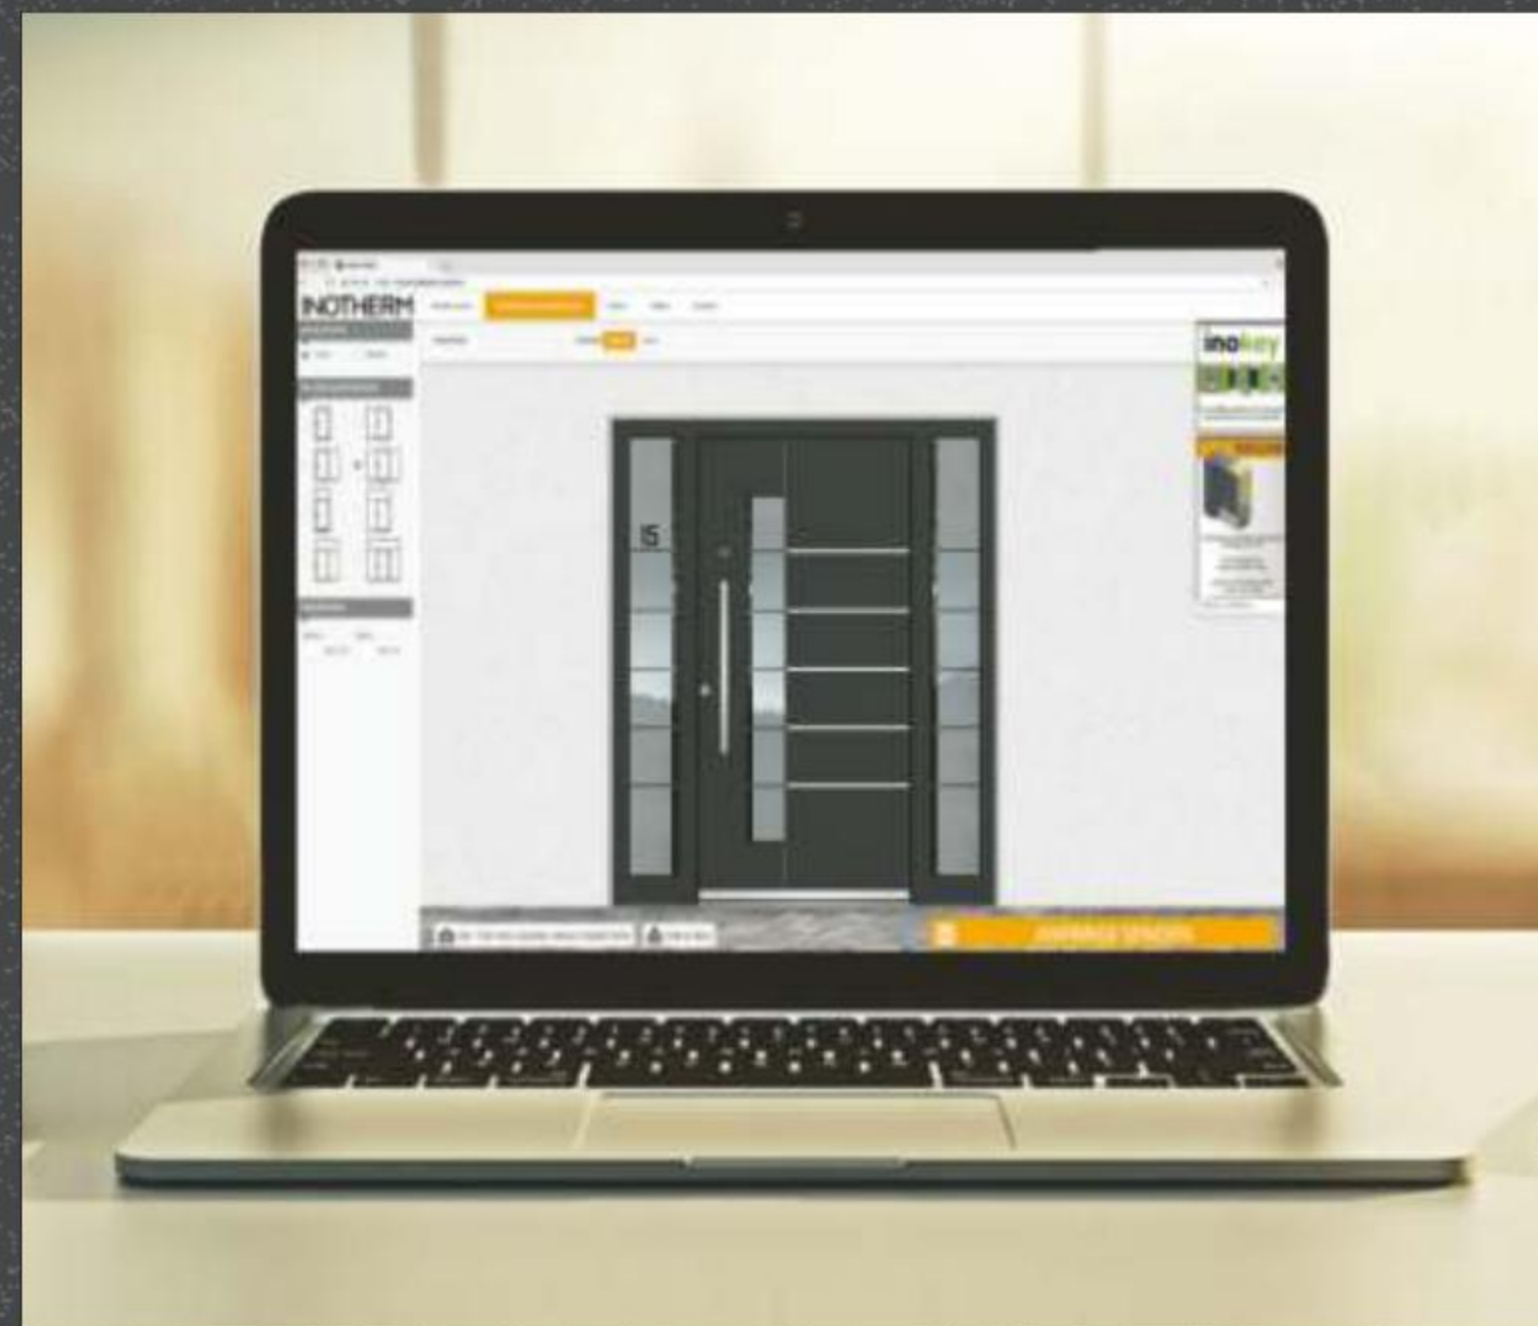

If you want concealed door hinges on your door, this is possible at an extra charge.

The completely concealed door hinge makes the INOTHERM door an even more discreet and modern entrance door.

It combines the highest design standards with robust technology, a load capacity of up to 120 kg and noticeable advantages during assembly. The two-part construction makes it particularly easy to hook and unhook the sash, and the convenient 3D adjustment allows maximum scope for side, height and contact pressure adjustment.
