Camargue® Camargue® Skye

**The standard for quality
and design in patio covers.**

Camargue is for those who love a beautiful and sleek finish. The seamlessly integrated options and side infills add to the soothing environment, surrounded by greenery and with maximal control over the weather conditions through the rotating aluminium blades.

Camargue Skye takes it to the next level with its rotating and retractable blades. With the same invisible integration of all elements, of course.

Comfort

Comfort, design and engineering meet the highest possible standards. The Camargue and Camargue Skye are completely customisable to your needs and wishes.

Mastering sunlight

Shelter

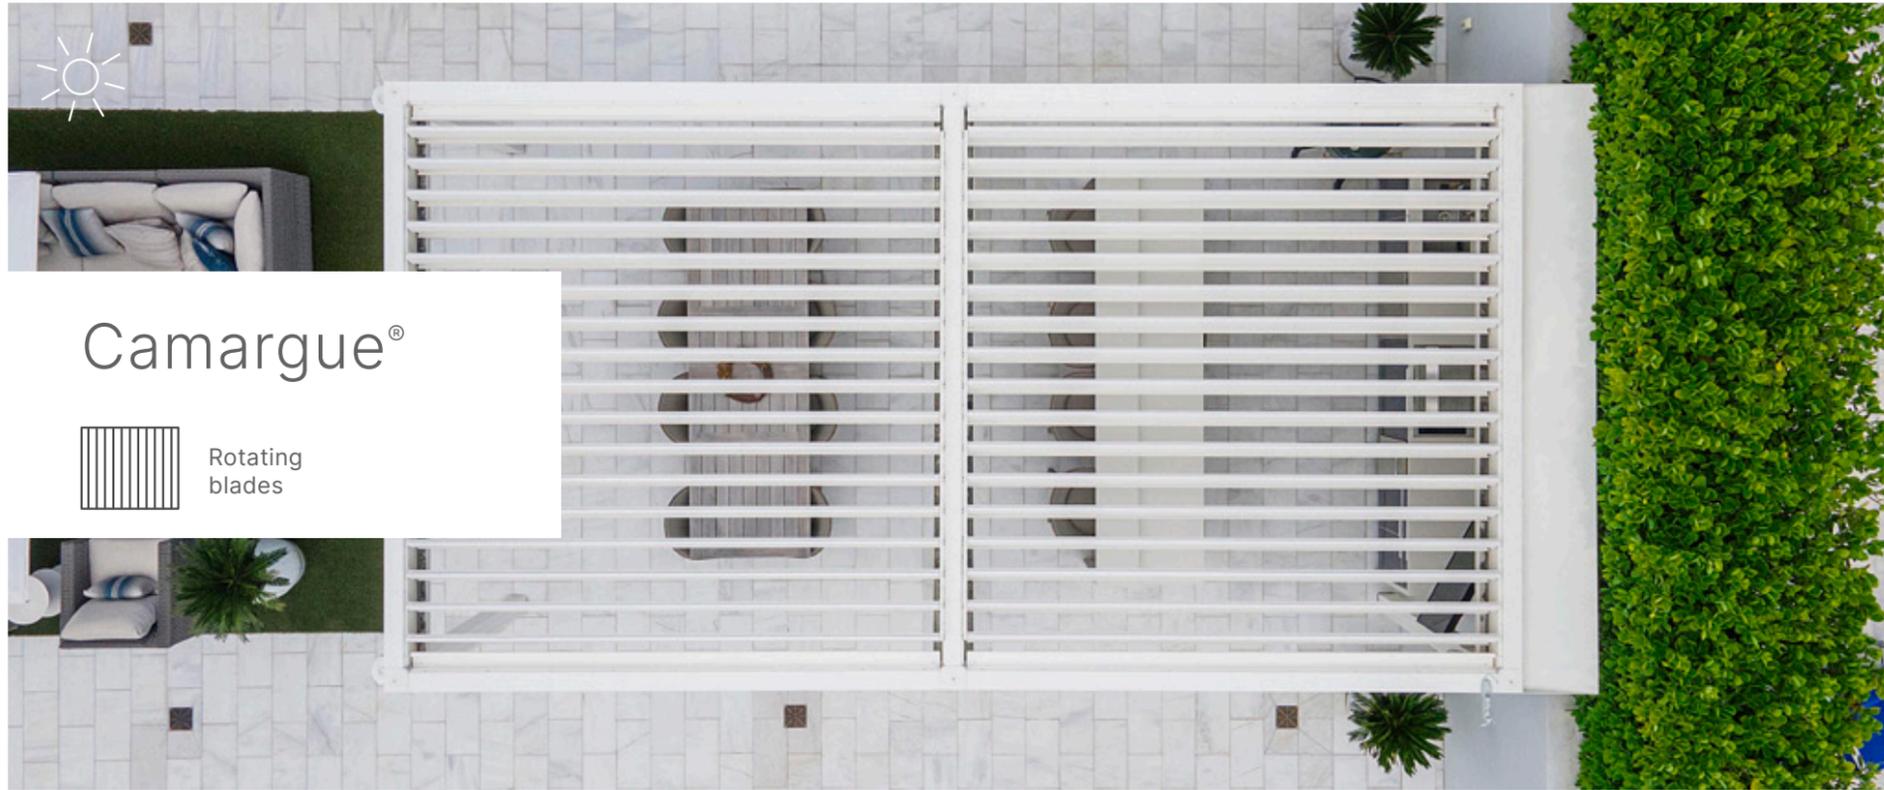

Lighting

Mastering sunlight

Use the rotating and retractable blades to play with shade and light, or use them to create better airflow and let heat escape. Sun protection screens, sliding panels and/or outdoor curtains only multiply the possibilities.

Camargue®

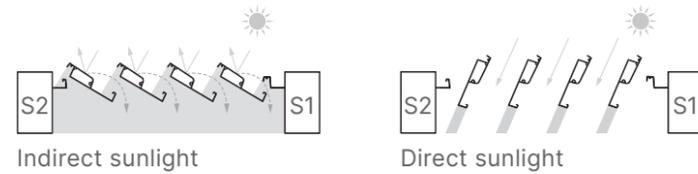

Rotating blades

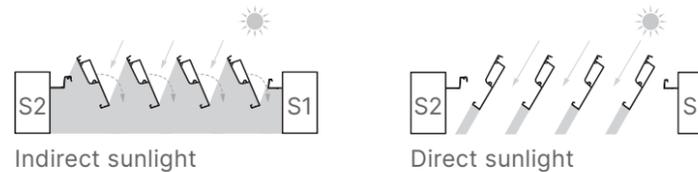

Sun protection blades

You can rotate Camargue's blades up to 150° and Camargue Skye's up to 135°, allowing you to let the sun in or to create shade, any time of the day.

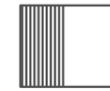

Sun protection - keep light out when open

Maximum sunlight - bring light in when open

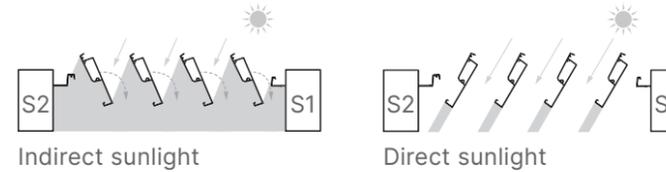

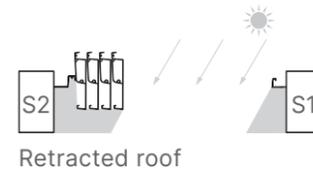

Camargue® Skye

Maximum sunlight - bring light in when open

S-Drive Technology

The S-drive technology of our Camargue Skye bladed roofs ensures an even and smooth opening of the blades by equal distribution of the driving force via a spindle.

S-DRIVE
PATENTED TECHNOLOGY

Sun protection screens

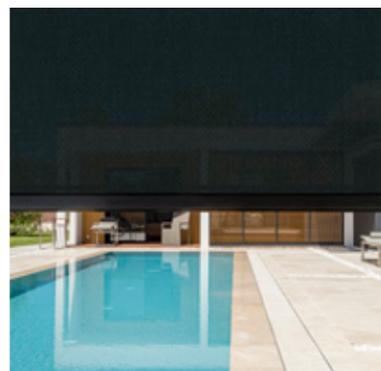

Seamlessly integrated screens allow you to create the perfect shadow. The fabric is colourfast and resistant to moisture and heat. Thanks to our patented Fixscreen technology, the screens stay firmly attached to the structure, offering you extra protection from wind and rain.

Fully customisable

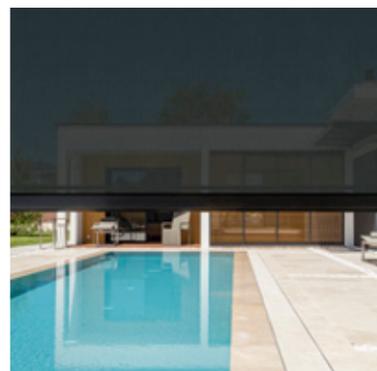

Our fabrics are available in sizes up to 17 m² and they come in different weave patterns to create the ideal level of transparency or privacy. You can even integrate a full-width crystal window to retain an optimal view of the outside. You can order them in more than 50 RAL colours or print your own design on the fabric, such as a logo or a photo.

The screen head box perfectly blends in with the cover's supporting structure, resulting into a sleek, minimalist design.

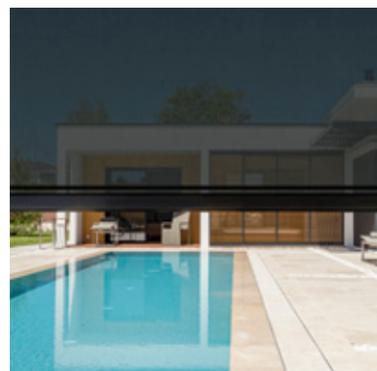

Privacy screen

Fibre glass fabric with 1 % openness for increased privacy

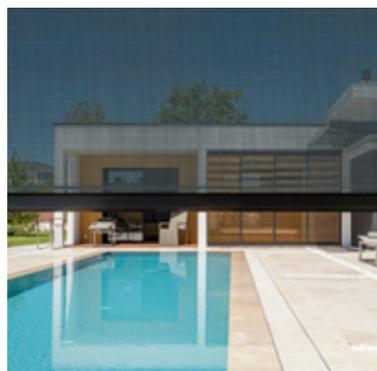

Natté screen

Tightly woven fibre glass fabric with 3 % openness

Sergé screen

Tightly woven fibre glass fabric with 5 % openness

Tuffscreen

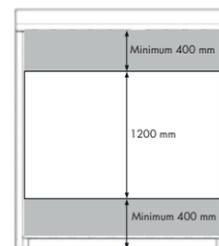

Insect mesh

Crystal window

To stay fully connected with your outdoor space, a transparent Crystal window can be added to your Fixscreen. This transparent fabric type consists of PVC (fire classification M2) and is always 1200 mm high and runs across the entire width of the Fixscreen. There is a minimum distance of 400 mm between the Crystal window and the top and bottom edges.

TIP: A distance of 800 to 1000 mm from the bottom, guarantees an optimal view for people who are under the patio cover.

Sun protection panels

Mastering the sun in a stylish and cosy way? Our Loggia sun protection panels in an aluminium frame are available with horizontal blades, vertical wooden blades or screen fabric. Pick your favourite infill while adding functionality to your patio cover. These Loggia panels will give you just the right amount of shade or sunlight, during any season and at every moment.

Privacy

With Loggia Paro Privacy panels, the blades can be manually rotated to the desired position.

Sliding system

The sliding system rests on a bottom guide that compensates for level differences of up to 6 cm thanks to the patented Flexguide technology.

Outdoor curtains

Our curtains are made-to-measure for every patio cover. The durable and water-repellent polyester is specially treated for long-term outdoor use.

Their dirt-repellent features ensure that the curtains stay in great condition. Choose between twelve colours that will retain their colour and shape after every wash (p. 54).

Shelter

Set blades to shut automatically with the first drop of rain. Choose side infills that keep rain and wind at bay, and integrate heating wherever you want. Transforming your Camargue or Camargue Skye into the perfect cocoon for every season is simple.

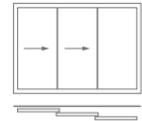

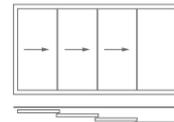

Glass sliding panels

Glass sliding panels are a great option when you want to stay protected from bad weather conditions and insects, while maintaining a full view of the outside. Our glass panels are made of 10 mm tempered safety glass and have an optional lock system, adding extra safety for you and your outdoor furniture. They have a durable and smooth sliding technology and can be placed even on a sloped terrace.

Highly durable guiding, even on a sloped terrace.

Aluminium coated handle (can be used on both sides).

Fixed walls

Fixed aluminium walls add a unique, contemporary character to your outdoor space. They offer protection from bad weather conditions and give you extra privacy. Choose between vertical (Linarte) or horizontal (Linus) direction of the aluminium profiles.

Linarte walls can be installed at full height or at a height of your choice, with one side finished with aluminium and the other side with canvas fabric.

Linus walls can also be installed at full height or at a height of your choice, with both sides finished with aluminium.

Whether you pick a horizontal or a vertical look, both sides of the wall are aligned with the column, creating an elegant and cohesive look.

Linarte® Fixed wall
Vertical aluminium profiles

Linus® Fixed wall

Heating

By integrating heating elements into your outdoor living space, you create the ideal climate at all times, even in winter.

Lineo® Heat

Unique on the market is our fixed blade with seamlessly integrated 1400 W heating, equipped with short-wave infrared lamps. You enjoy immediate heat distribution and pleasant radiant heat right where you need it. Choose between a version with one or with two heating elements per blade (1400 / 2800 W), and between a black or white ceramic glass cover.

Efficient technology positioned exactly where you need it.

Beam Heat & Sound

With the Beam Heat & Sound, you can enjoy your favourite music and/or functional heating 24/7. The module extends over the full width of the roof and is lacquered in the colour of your patio cover. Both the speakers and the heating element are seamlessly integrated, giving this option an extra sleek look. Moreover, you can rotate the 'beam' up to 30° to optimise the heat distribution. All cabling is concealed invisibly in the structure of the pergola. The heating works with short-wave infrared radiation (2400 W), providing instant heat distribution and a cosy feeling.

In turn, the waterproof audio system brings a cosy atmosphere under your patio cover. You can connect it to a multiroom system or control it via Bluetooth.

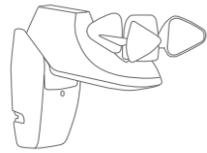

Bluetooth

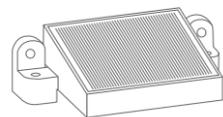

Weather sensors

To offer optimal protection, our patio covers can be combined with a rain and/or wind sensor. These sensors monitor the environment and automatically ensure your desired comfort based on changes in a specific situation. They continue to operate fully autonomously even when you're away from home.

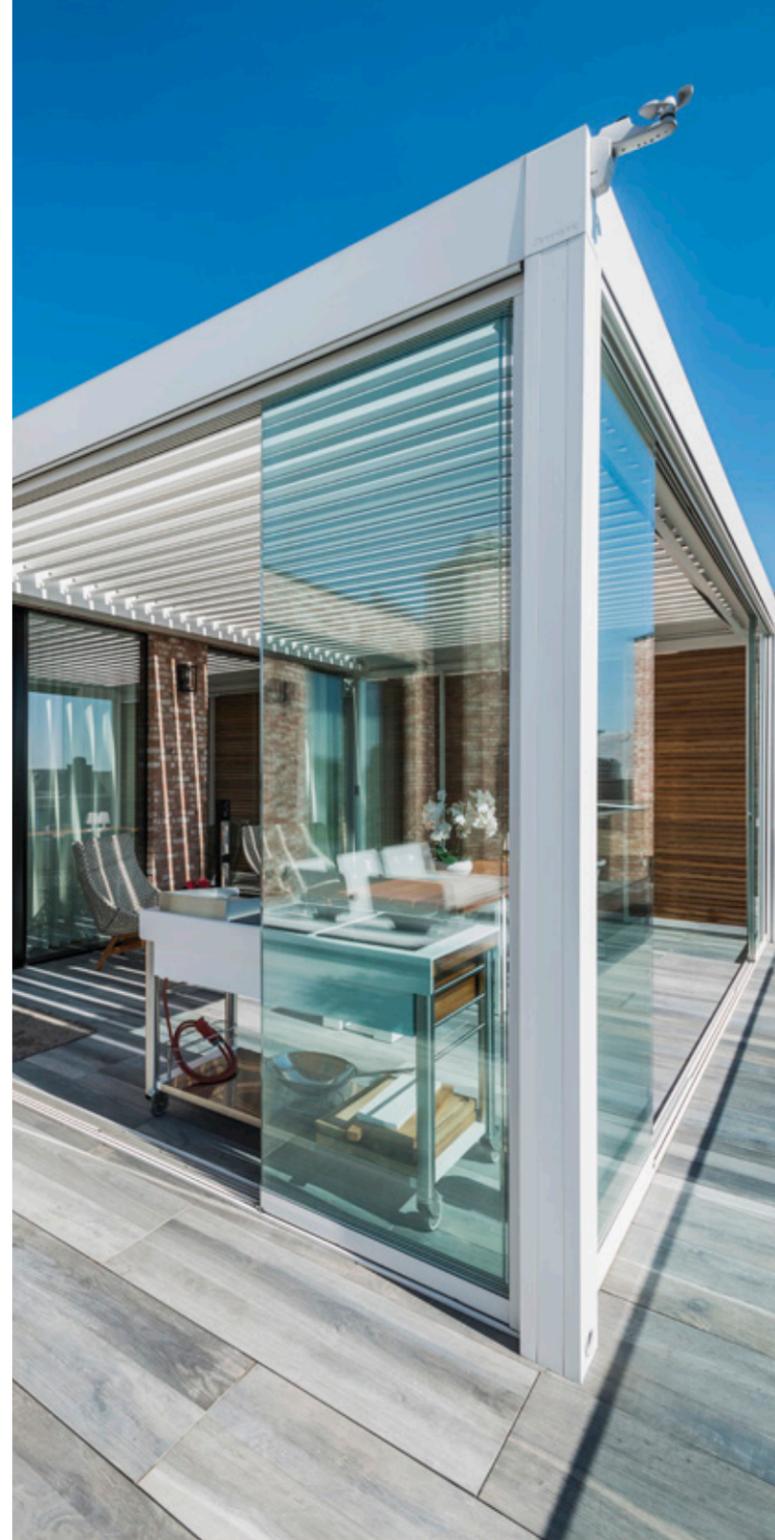

Wind sensor

A wind sensor controls the sun protection screens of your pergola, according to a pre-set wind speed. In the case of extremely strong winds, it can retract your screens in order to protect them from being damaged.

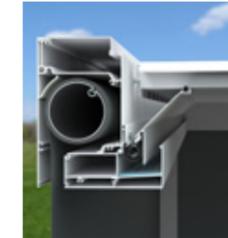

Rain sensor

A rain sensor can automatically close your bladed roof when rain is detected, keeping the furniture underneath your patio cover dry at all times. It has an integrated temperature sensor, allowing it to also serve as a snow sensor. When precipitation is detected below a certain temperature, the sensor will recognise it as snow and move the roof to the pre-set snow position.

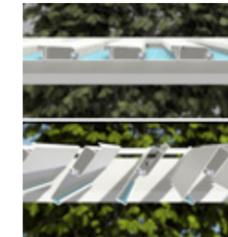

Innovative technologies

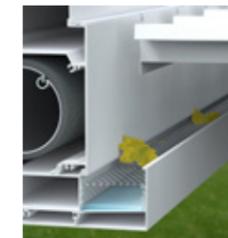

Protecto®

Extra protective profile between the blades and the gutter. This profile offers protection from wind, drizzle and snow that can enter the patio cover between the blades and the frame.

Innovative gutter border

Welded aluminium drips, coated to match the colour of the roof blades. The specially developed gutter border prevents your patio and furniture from getting wet when the blades are opened after a rain shower.

No splashing water

The gutters are equipped with special diffusers to prevent splashing water.

Integrated water drainage

Water will be drained down an integrated drainpipe in the columns of your choice.

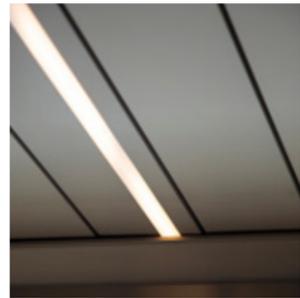

Lighting

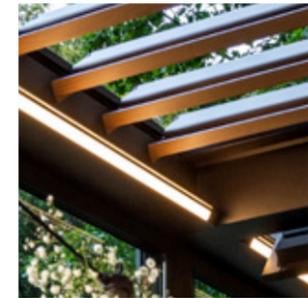

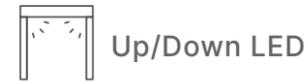

Create the right atmosphere for any occasion by combining functional and ambient lighting. Your Camargue's design captivates, both indoors and outdoors.

Lighting

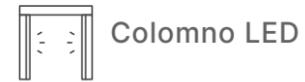

With our wide range of lighting options, you can combine functional and ambient light and become the ultimate 'mood operator'. The high-quality lighting solutions for outdoor use are dimmable and available in warm white or pure white. For our Up-LED, you can even choose lighting in different RGB colours.

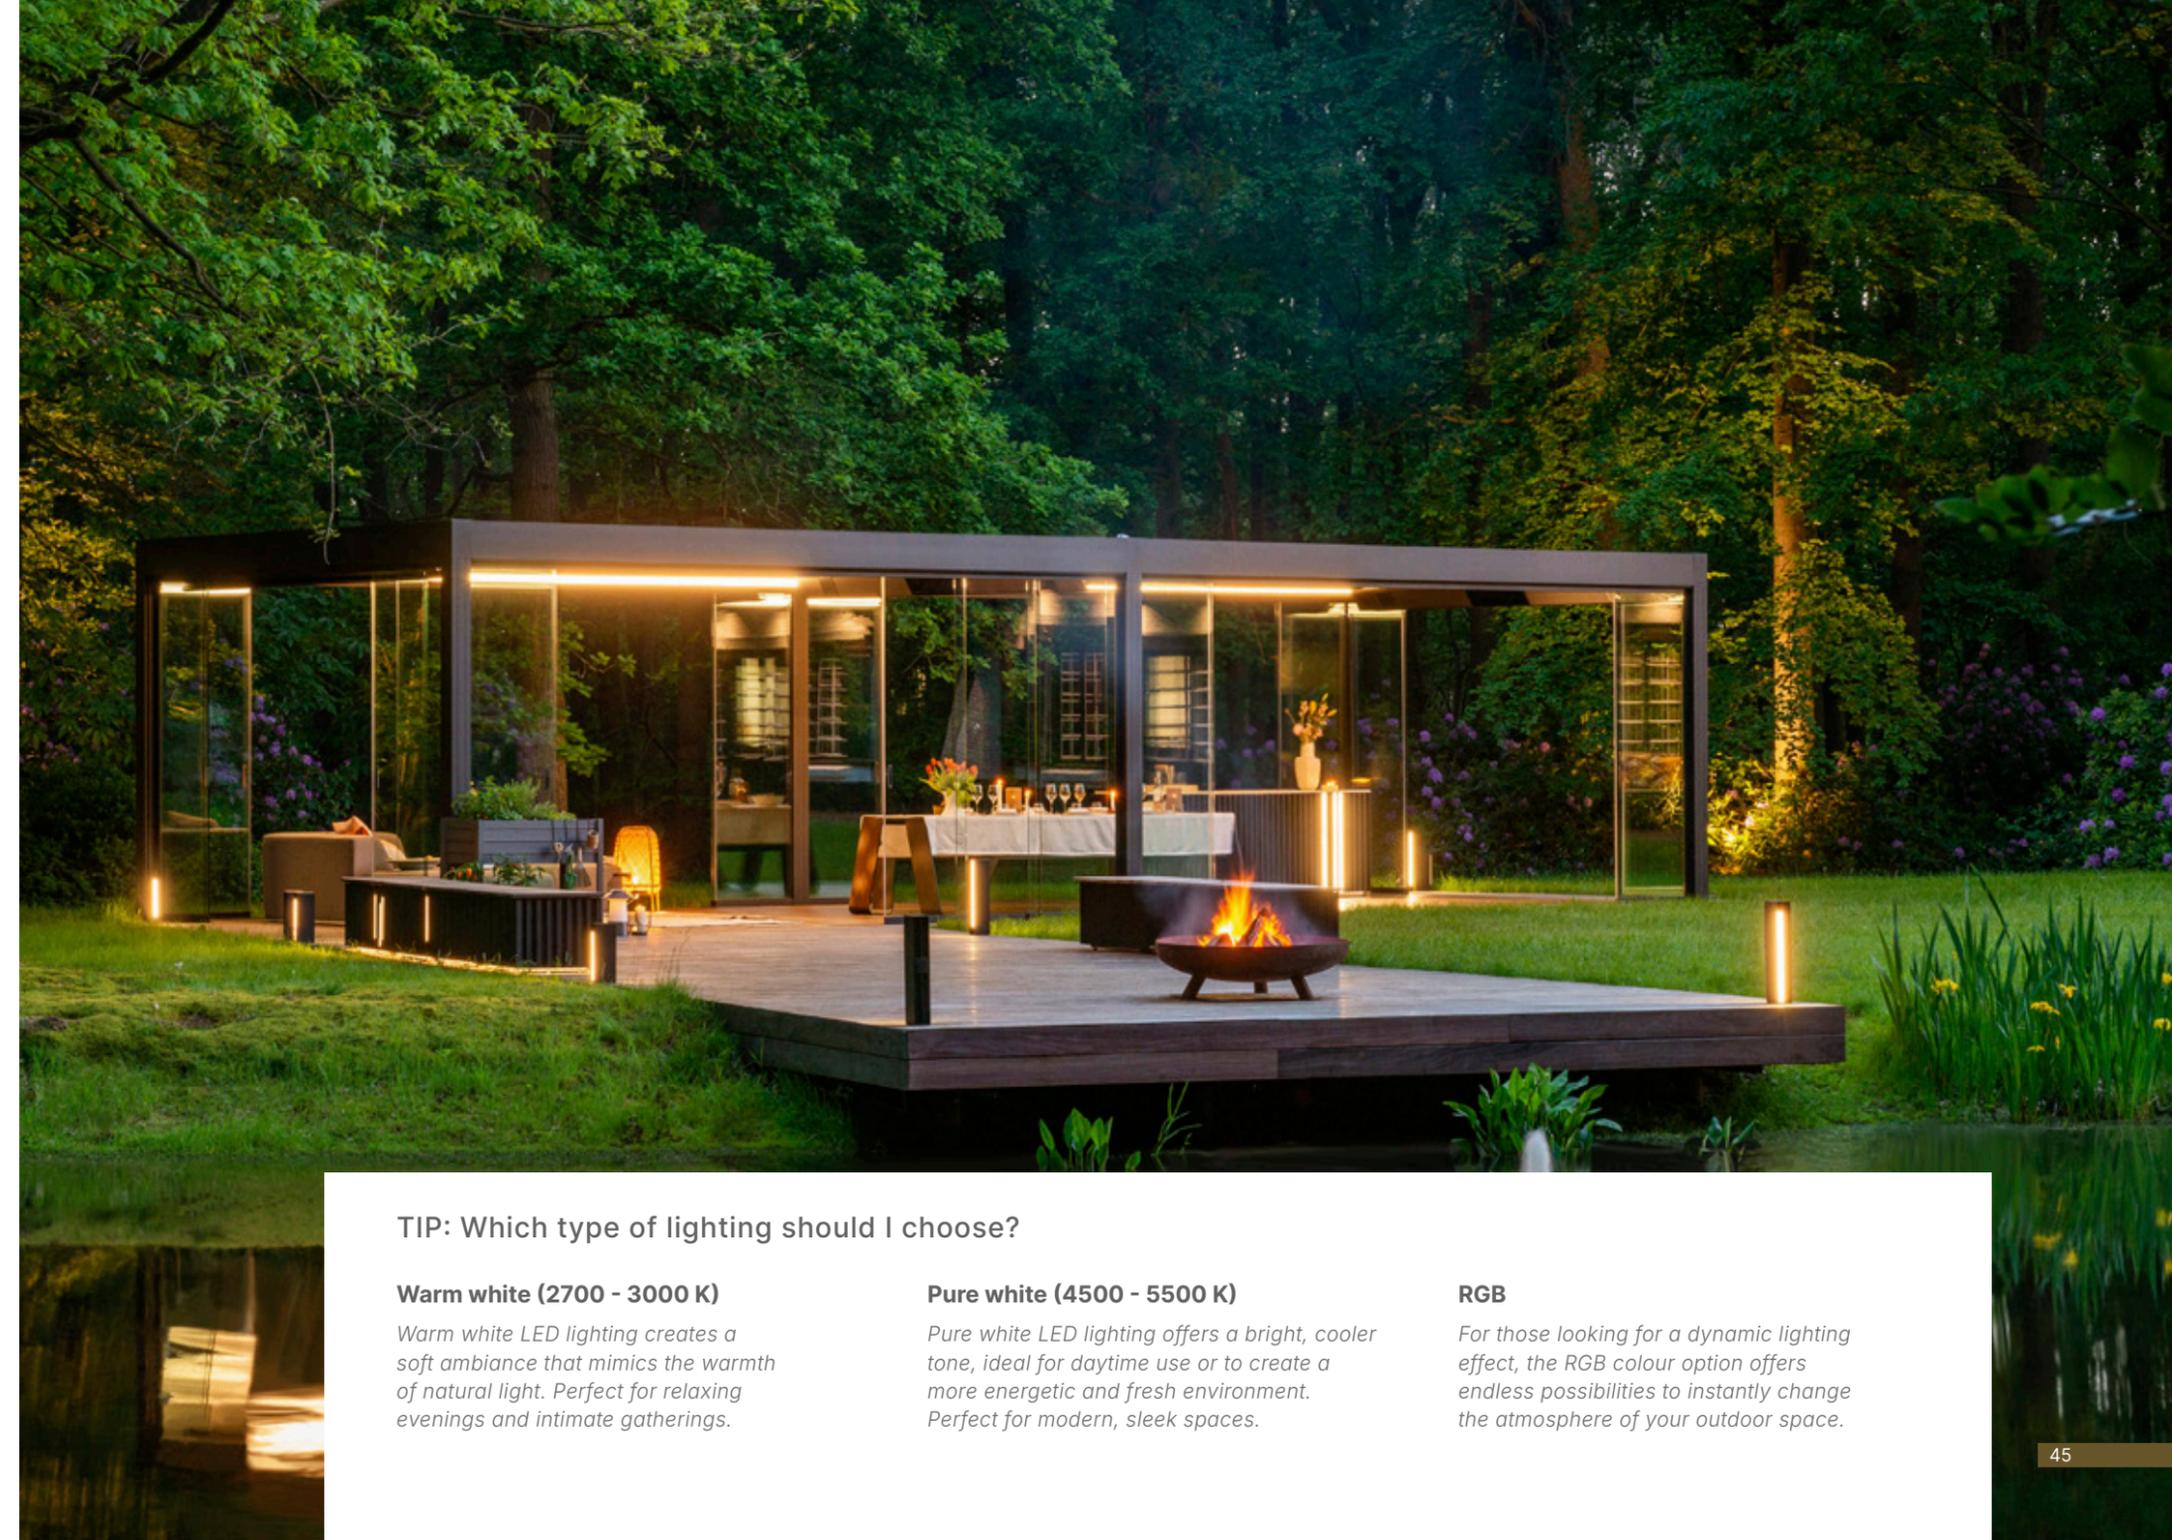

Integrated LED lighting in the blades. 180 high-quality LEDs per metre offer a very high lighting output with an even distribution and without visible dots.

Integrated LED lighting on the inside of the frame. Equipped with upward and/or downward lighting, the Up/Down LED provides indirect or direct ambient lighting.

Integrated LED lighting on the inside of the columns. The perfect lighting setup to accentuate your patio cover. Colomno LED combines well with Down LED.

TIP: Which type of lighting should I choose?

Warm white (2700 - 3000 K)

Warm white LED lighting creates a soft ambiance that mimics the warmth of natural light. Perfect for relaxing evenings and intimate gatherings.

Pure white (4500 - 5500 K)

Pure white LED lighting offers a bright, cooler tone, ideal for daytime use or to create a more energetic and fresh environment. Perfect for modern, sleek spaces.

RGB

For those looking for a dynamic lighting effect, the RGB colour option offers endless possibilities to instantly change the atmosphere of your outdoor space.

Customisation

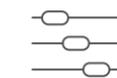

Renson has a wide range of personalisation options, allowing you to design the ideal outdoor environment that reflects your unique style and meets all your practical needs. From colour choice to materials and finishes, you can create a patio cover that seamlessly blends in with the aesthetics of your home while enriching your outdoor lifestyle.

Design Styles

Design Styles

In collaboration with trendwatcher Hilde Francq, we have created six complete Outdoor Design Styles as an ideal source of inspiration and a tool to help eliminate any possible stress in the choosing process. Our Design Styles match colours, materials and textures to guarantee a tasteful and harmonious look and feel of your outdoor space.

Find out more about our Design Styles.

Pure Essence

Light and space – that is Pure Essence. The pale colours and soft finishes give this style a featherlight, nearly ethereal feel. They create a place perfect for casting off your burdens, a space to completely unwind.

Idyllic Garden

Idyllic Garden takes you on a stroll through the garden. Sober greys and subtle greens inspired by plants give this style a contemporary look and ensure you can relax surrounded by nature.

Earth Oasis

The warm earth tones of Earth Oasis evoke the feeling of summer. Natural and artisan materials connect you to the richness of the earth. They ensure perfect harmony between inside and outside and immediately transport you to sun-drenched distant regions.

Spiritual Harmony

A minimalist style in a dark colour palette, that's Spiritual Harmony. We were inspired, among other things, by Japanese traditional architecture for the colours and materials. The result is an intimate contemporary architecture that balances body and soul and provides a protective, calming atmosphere.

Crystal Lounge

Crystal Lounge is sleek and minimalist. The fresh green tones create an airy feeling, which is further enhanced by the light material palette. These elements create a modern, light architecture that blurs the boundaries between inside and outside.

Tech Cocoon

Contemporary design converses with dynamic, playful colours such as soft coral. A feeling of pure transparency predominates, with an emphasis on technical materials such as glass and steel. This refreshing style gives your garden room a bold urban look.

Additional options

To answer all your personal needs and wishes, we add these options to your Camargue or Camargue Skye at your demand.

Fixed, non-rotating blade

The Lineo Fix is a fixed, non-rotating blade, allowing you to attach extra accessories to a bladed roof such as heating, a sound system, extra lighting options, an outdoor fan, etc.

It replaces one standard rotating blade and is invisible when the roof is closed.

Surface-mounted power socket

Include a power socket in your Camargue or Camargue Skye pergola. It comes with a 230 V or USB-A connection and is splash proof (IP55). You can opt for a single or double socket.

Translucent blades

Allow more natural light under your bladed roof thanks to Lineo Luce. This way you can create more openness, even with the roof closed.

These translucent blades are made of laminated safety glass and aluminium supporting profiles.

Combine side elements for more comfort

Opt for extra comfort and protection against excessive sun, wind and cold by combining glass pannels, with Fixscreens and/or curtains.

On each side of your Camargue (Skye) you can choose to integrate up to three side elements.

Extensive personalisation

Aluminium

Our pergolas (structure, roof and side elements) are available in any RAL colour, so you will definitely find the perfect shade to match your style. By perfectly matching the colours with your existing architecture, you create a harmonious whole with a strong look.

Wood look

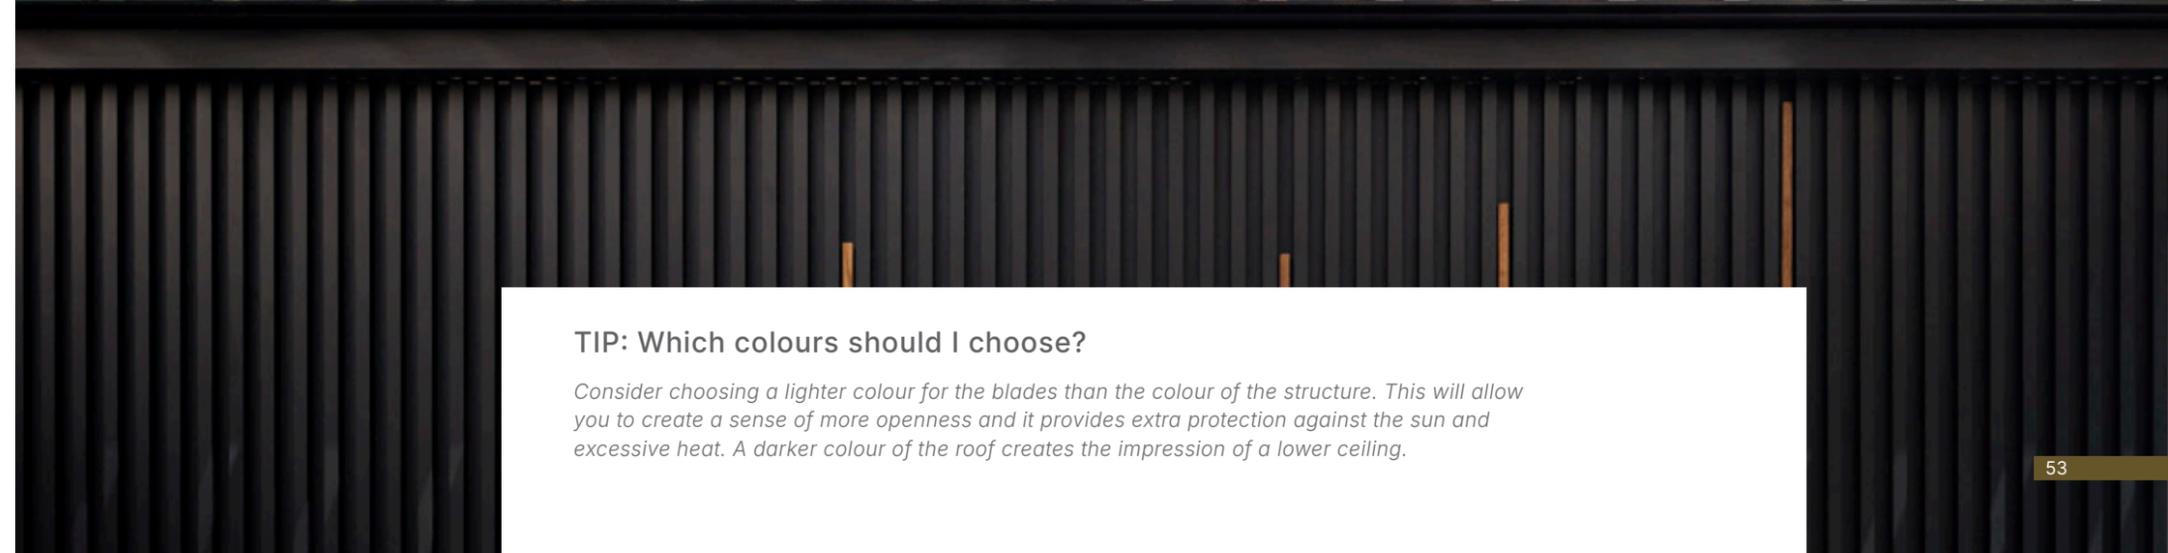

Opt for the natural look of wood, but still enjoy the advantages of aluminium:

- Ease of maintenance
- Colour fastness
- Shape retention

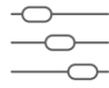

Wood

The Loggia sun protection panels can be equipped with real wood. This natural material is accompanied by natural greying and requires a bit more specific maintenance, but it makes a very nice link to the surroundings where your Camargue (Skye) will be located.

TIP: Which colours should I choose?

Consider choosing a lighter colour for the blades than the colour of the structure. This will allow you to create a sense of more openness and it provides extra protection against the sun and excessive heat. A darker colour of the roof creates the impression of a lower ceiling.

Extensive personalisation

Fixscreens

Fixscreens are available in more than 50 colours and in three weave patterns as well as insect mesh (p. 24).

Contact your local Renson professional to find the perfect colour and composition for your patio cover screens.

TIP: Which colour should I choose?

- A dark fabric blocks the heat better
- A fabric with a small opening factor lets in less heat
- A fabric in a light colour reflects more sunlight

Choose thermal comfort and avoid overheating:

- A dark fabric offers a better view of the outside during the day
- A light fabric lets in more natural daylight
- A fabric with a small opening factor:
 - Lets in less light
 - Is better against glare
 - Offers more privacy

Fabrics

A soft touch can be added with textiles, available in different colours and patterns, depending on the application. Fixscreens are also available in different types of weave pattern, which have an impact on the style, as well as on the transparency. The textile choice for curtains is a determining factor in terms of atmosphere and cosiness. This softness can also be continued in Loggia Canvas.

Loggia® Canvas

Loggia Canvas fabrics are available in the same colours as the screens, plus the eight colours below:

Delicate Beige

Antique Bronze

Desert Rock

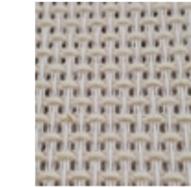

Deep Wood

Crystal Teal

Soft Coral

Cream

Light Grey

Smart control

Renson Connect App

The Renson Connect App is a perennial favourite for smart control of your patio cover from your smartphone or tablet. This way, you can easily operate your bladed roof, screens, LED lighting and heating of your pergola, even when you are away. The Renson Connect App can be downloaded for free and is easy to configure and use. The app can be used in combination with all radio-controlled Renson patio covers (Somfy io and RTS compatible). In addition, a Somfy Tahoma smart home hub is also required in the home.

The smart io-homecontrol communication technology immediately shows the status of your various options (blades, screen, lighting, heating) in the app. The communication between your systems is encrypted and therefore highly secure!

Hand transmitters

Control your Camargue via a simple remote control. A single touch allows you to open or close the roof, adjust lighting, power on the heating...

Wall switch

The Somfy wall switch is the perfect solution for those who prefer the tactile control of a physical switch instead of a remote control or smartphone app.

Home automation

Moreover, your pergola can be integrated into your home's wider automation system. This allows for even more advanced planning and automation functions and offers truly connected outdoor living.

Quality

Our patio covers offer different levels of protection and comfort. To ensure this comfort, they are thoroughly tested for water drainage, load-bearing capacity and wind resistance.

Structural strength

Sustainability

State-of-the-art facilities

Structural strength

At Renson, we guarantee the highest quality standards by having our products thoroughly tested and certified according to the strictest industry standards.

Aluminium structure

Camargue and Camargue Skye are built with extruded aluminium profiles, which are known to be light, strong, rust-resistant and able to withstand extreme weather conditions.

Water drainage

Water resistance and drainage are tested using a spray system that simulates rainstorms. In this way, we determine the flow rate of our patio covers and how this can be further optimised.

Load-bearing capacity

Patio covers are subjected to various weather conditions, such as wind and snow. These forces were determined through static strength calculations and validated by internal tests. The maximum load capacities depend on the basic structure, surface area, model, inserts used and the location. As a starting point, the structure can deflect 1/200th of its longest dimension, without permanent deformation. This is possible thanks to the patented frame tensioning system. In case of heavy snowfall, the roof must be open.

Wind

Static calculations based on Eurocode 9* require the roof blades to be opened (placed vertically) at wind speeds > 50 km/h. At higher wind speeds, the blades can no longer be operated as the forces become too great for the motor control. If the roof blades remain closed for any reason at wind speeds over 50 km/h, wind tunnel tests have shown that the roof blades can withstand wind speeds up to 160 km/h for Camargue and up to 120 km/h for Camargue Skye. For Camargue Skye, they can withstand up to 160 km/h only with stacked blades. You can operate the sun protection screens upwards at wind speeds up to 30 km/h. All screens must be retracted at wind speeds over 60 km/h. Loggia panels and glass sliding panels should be opened at wind speeds over 50 km/h.

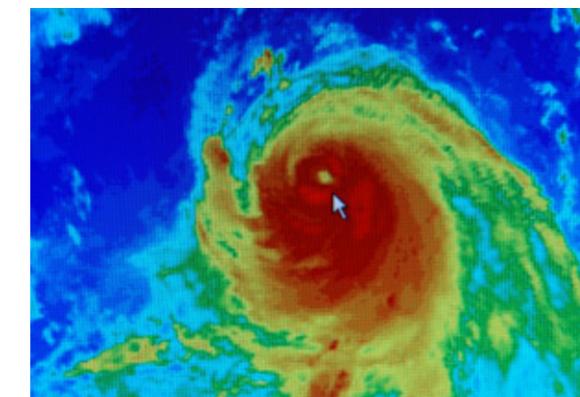

Miami-Dade County

Renson Camargue has been subjected to rigorous testing to obtain Miami-Dade approval.

This means that Renson's products have proven to perform reliably under high wind loads, heavy rainfall and other extreme weather conditions, which are common in regions like Florida (USA), which are often hit by hurricanes and tropical storms.

The approval process includes rigorous wind resistance and structural testing in over-all compliance with Miami-Dade's Product Control Section. Once a product is approved, it meets the highest quality and safety standards and homeowners and contractors can have peace of mind. With Miami-Dade approval, Renson Camargue not only offers exceptional design and performance, but also meets the most demanding requirements for wind resistance and structural stability, making it the ideal choice for homes in hurricane-prone areas.

Miami-Dade Hurricane resistance

Invisible strength

Camargue's fully enclosed column structure meets the strictest building standards.

Wind-resistant sliding panels

Automatic locking thanks to mechanical stoppers

*Eurocode 9 is a European standard that provides guidelines for the design of aluminium structures. Renson strictly follows the Eurocode 9 standards in the development of its products to ensure the safety, stability and durability of its patio covers, even under extreme weather conditions.

Sustainability

The choice of aluminium as the main material for the Renson patio covers is a very conscious choice. It sets the tone of our sustainable outdoor living story.

Aluminium is highly resistant to natural weather influences and requires minimum maintenance. Moreover, the fact that it is highly recyclable helps reduce our ecological footprint.

Furthermore, our products are manufactured in a state-of-the-art production facility powered by renewable energy, where we adhere to strict standards for minimal emissions. The result is a patio cover that meets the highest standards, allowing you to enjoy your outdoor dream space worry-free.

Warranty

Register your patio cover online after installation, and receive a 10-year product warranty on both the structure and paint.

¹ 10 years after registration. Standard 5-year warranty for areas < 500 m from the coast or areas with heavy pollution, on wood design, aluminium castings and mounting brackets. Attention: Chlorinated fumes in an outdoor environment will not affect the motor system, but direct contact of the columns and/or mounting feet with chlorinated water may cause the coating to peel off. Therefore, the patio cover should preferably be installed at a location where it cannot come into direct contact with swimming pool water or seawater (this is not covered by the warranty).

² Rippling typical of polyester fabrics is not covered by the warranty. 2 years warranty on Crystal full width.

Renson Maintenance Set

Your patio cover is designed to last many years outdoors, in different weather conditions. To maximise the life expectancy of your pergola, we advise cleaning and maintaining it annually with the Renson Maintenance Set. The products in this set are carefully chosen and help preserve the intense colour and shine of the powder-coated aluminium, offering extra protection against acid rain, sea air and UV rays.

Minimal maintenance, maximum enjoyment

Renson is a very focused on ease of use and maintenance. Because the less time you have to spend cleaning, the more time you can spend enjoying your outdoor space.

State-of-the-art facilities
